Thread: [Have a PNY 1070 8gb GPU Can someone help me create a build ? \(Parts\)](#)

JuJu . - April 8, 2018, 1:48 pm

So I have the GPU . I'm planning on running games like fortnite with ease, want it to look fancy as well I have a budget of about 1000 left for parts. Thank you :)

sleek - April 8, 2018, 1:57 pm

\$100 more?

You still have to buy a CPU, RAM, coolers, power supply, and a case. RAM alone is going to cost you that much. Please tell me you missed a 0.

This ^^^^ and a 100 what? potatoes?

trauma - April 8, 2018, 2:17 pm

Are you sure you meant to type 100 and not 1,000?

Also if you could update us with your currency, that would help.

JuJu . - April 8, 2018, 2:17 pm

LMAO im sorry guys meant 1000 more. I would like not to spend 1000 more. Buuuut, if its worth it then thats fine by me. I would like to spend about 700-800 more but if its better off just spending the 1000 thats fine as well.

He told he wanted me to list a Liquid Cooler for him to purchase it down the line. The CPU cooler is temporarily.

Better CPU.

The X62 is a solid cooler, not sure what you've heard but it is one of the top AIO coolers available.

Ram is the same speed and latency but less expensive.

Faster SSD, also slightly higher capacity.

Higher capacity HDD.

So if I buy that build I should be pretty solid?

I mean I don't see why not.

PSU is enough for the system.

CPU cooler can handle the CPU with loads of room to spare.

Storage space is adequate (can always add more)
This build will handle all games perfectly in 1080p / 1440p.

The cooler comes with thermal paste.
