Is a nintendo switch worth it?

In game i can get one and any game for £370
should i buy one or invest it into something else

It depends on if you like the exclusive games on it and if you like mobile gaming because that's pretty much what it's mostly for

It just depends, there's really not a lot of games for it rn which is why I don't play mine much. I beat botw and mario, splatoon 2 is fun but not that much. Smash isn't out yet and most the other games you've probably already played like skyrim doom etc

If you're not dying to ply a specific game I'd just wait til smash comes out at least and maybe for a price drop

I'd wait till Smash comes out. I beat BOTW and am bored with it right now. BOTW is a great game though, that alone made me want to get a switch and I don't regret it at all. One of the best games I have ever played.

I love mine. Mario Odyssey and BoTW are the best games of 2017 imo. Also some other good exclusives like Xenoblade Chronicles 2, Golf Story, Mario Kart 8, Splatoon 2, etc.
