UPON PURCHASE YOU'LL RECIEVE THE FULL SOURCECODE FOR FREE WITH IT! IT'S WRITTEN IN PHP SO EASY TO INTEGRATE WITH A WEBBASED SERVICE

By the way if they decide to add captcha n shit and ruin all generators it's not my fault (I promise)

Eh this code can pretty much create a few hundred accounts per second, not sure why I made it that fast but hey why not.

Every account generated will recieve 800 points for free which is redeemable for these things:

1. Big Gulp Drink
2. Any ring donut
3. Medium 7 eleven hot coffee
4. Any taquito
5. Any 7 eleven fresh fudge brownie or 2 pack cookies
6. 7 select bag of singles serve chips 1.25oz
7. Medium slurpee drink
8. Medium chillers iced coffee

All these freebies for free? Why the hell not!

Price: \$3 (if you can find a generator anywhere cheaper I'll lower the price even harder, this shit took me less than 15 minutes to code)

Only accepting: Crypto, PP

Currently can't message you since I don't have 40 posts. I just had some questions such as will this require a VPS and what If I don't have a website to generate etc. The other question was how much would it cost for a custom project.
