Hello fellas it's ye boy Aggron again. and today I'm selling my Juulpod cracker (written in PHP)

Functions:

1. Proxyless
2. Multi-threaded, you can select how many threads you want to use
3. 100% working checking for valid strings so no false positives
4. Multiplatform program, it can be ran anywhere. Even your fridge!
5. Cheap due difficulty
6. I was able to hit 100k attempts a hour but my server is in EU so it's slow as fuck to connect with NA
7. Generates the codes for you, no need for a list! It's simply run and go!
8. Auto saves ALL valid codes
9. Runs 24/7

Price: \$25

Accepted payment methods: BTC/ETH/PP

By purchasing this product you acknowledge that getting codes isn't guaranteed, it's a bruteforcer, not a magic machine. It'll attempt random possible juul codes and check if they work or not.

How many hits have you gotten so far and can you show some proof of it getting hits? The odds of getting hits are crazy so I am just curious.

Posting this on 40 different threads that don't even offer vouch copies is gonna get you banned.

Not only that but you're also copying the exact same message.
