Thread: [Can C # and vbs \(VBScript\) communicate with each other \(TCP / IP\)?](#)

PH_Trick - April 11, 2018, 5:35 pm

I am Korean.

There is not enough data in Korea.

I made it using Google Translator.

Can C # and vbs (VBScript) communicate with each other (TCP / IP)?

I wonder if communication (TCP / IP) is possible like VBS worm tool.

If communication is possible, please let me know how.

gigajew - April 11, 2018, 6:36 pm

Yes, TCP is a socket transfer protocol, it is universal. The only thing that could be different on the two ends is the endianness of the bytes.

Thank you.

C # = server

vbs = client

It looks like this.

[The last question.]

Like RAT, they can communicate with each other and remotely?

I don't know if VBS has any library with sockets, but to answer your question; yes.
