Thread: [Bustabit v1 Source code with advance features modified by me.](#)

sindad - April 15, 2018, 12:40 am

Hello , friends i am selling bustabit source code for 0.05 BTC the original is sold for 2 BTC.

MiddleMan is accepted but when we take a middleman i will send you the advance version of source code and you should release BTC and then i will teach you or setup the code for you.

Features:

- 1- All security bugs fixed.
- 2- login and registration panel have self generated security password with recaptcha working.
- 3- Depositor works perfect.
- 4- Admin panel is also added which gives good access and control over user and withdrawals.
- 5- Its provably Fair.

All the above features are missing from the open source FUZZYHOBIT github public version . The public version is full of bugs and works worst it also does not have the btc deposit and withdrawals.

I will add more features at additional cost.
