Thread: [Opening a Picture from PictureBox1 on Form1 to PictureBox2 on Form2 \[VB.NET\]](#)

Effexion - April 15, 2018, 9:58 am

I am trying a tarantula keeper's app and want to display the picture a user loads in the 'Add Tarantula' form in the 'My tarantulas' form. I have had a Google around but the queries always seem a little long and vague. Can someone please point me in the right direction please.

Dalvik - April 15, 2018, 10:06 am

You can pass the Image object through the constructor of Form2.

Code public class Form2 : Form

```
{
    public Form2(Image img)
    {
        pictureBox2.Image = img;
    }
}
```

And you can call it like this:

Code public void SpawnSecondForm()

```
{
    Image img = pictureBox1.Image;
    Form2 form = new Form2(img);
    for2.Show();
}
```

I'm so confused lol. Thanks for the help, though.

Is this C#?

Yes but if you know VB.net you should be able to read it. As long as you know how parameters work in VB.net you should have no problems understanding what I said.

Yes, you're right. I have been out of practice for so long and wasn't that well-versed to begin with lol. Thanks for your help, sorted it.
