Thread: [Beginner project for a newbie?](#)

Pre-eminent - April 18, 2018, 11:59 am

What are some good projects for beginners at Python to start developing/coding. I need some simple projects so I can learn from the process of developing an actual project while studying the coding language.

Mr.Richie - April 18, 2018, 12:02 pm

A backdoor or a reverse shell to access a server when you don't know the password anymore.

wit - April 18, 2018, 12:04 pm

A mortgage calculator

Always the first project I make in any class for some reason

Something usefull to you. Image Resizer, FileCrypter, UsernameGenerator, Networktools like PortScanner or irc-bot, REST-microservice with tornado, webscraper with requests and beautifulsoup... you could do so much with python. Maybe solve some coding challenges

BlueDust - April 18, 2018, 1:59 pm

I enjoyed making these exercises/small projects when I began learning Python! It's doesn't have big projects or something but it's great for when you are just starting!

Thanks for the suggestions, I will start working on some basic projects during my weekends.

breaker1911 - April 19, 2018, 1:07 pm

depend on your current skill, you can make calculator, advanced calculator, some easy stuff like bruteforce if available, account cracker (pretty easy if the target doesn't have human verification)

Travelers - April 20, 2018, 4:07 am

I think the suggestions of the calculators is good. What I have always done, when I'm either learning something new or remembering something specific, I'll do the typical dice roll game and usually paper-rock-scissors. Lamé, I know, but this approach works well for me.

Try to make some sort of bot. I was very excited first time I used Selenium, Requests and Beautifulsoup. Though you should try to use API's when your making bots

TY for this post, very helpful!

Pre-eminent - April 27, 2018, 6:53 am

Thanks for all the replies, I've started picking up Python and once I'm a bit more familiar with the language I will try and code some of the suggestions.
