Thread: [SADD.IO: Web-Based Anonymity, Security, and Privacy](#)

nullifiedvoid - April 20, 2018, 2:15 am

(Apr 29, 2018 08:40 PM)Omniscient Wrote: [\[CITE\]](#) I think there is some serious merit to this project. I like to see new projects like this gain traction here on HF. I gave it a try and seems to work pretty well. I have to spend a little more time on it in order to really give proper feedback but I think it's worth trying for everyone. This should fill a service void for some members.

"As an Anonymity, Security, and Privacy platform, our vision is to provide Ethical Hackers, Businesses, and Government Entities the capability to use the Internet safely and/or secretly. SADD.IO gives Ethical Hackers the ability to anonymously report vulnerabilities found in the wild, Employees now have the ability to freely use the Internet at work without risking the security and integrity of their employer, and Government Entities can now engage targets without any form of culpability. We do this by enabling our diverse set of users to securely control self-disposing desktops that are routed through the Tor network."

John F. Kennedy - April 22, 2018, 6:44 pm

This is quite awesome, love that it's free. From what I tested, it's very slow, maybe that's because

I'm just using the free package. Hope it gets better over time!

nullifiedvoid - April 22, 2018, 6:52 pm

(Apr 22, 2018 06:44 PM)John F. Kennedy Wrote: [\[CITE\]](#) This is quite awesome, love that it's free. From what I tested, it's very slow, maybe that's because I'm just using the free package. Hope it gets better over time!

Hey John F. Kennedy,

Thanks for giving it ago! Yes, it is slow because the server for the free plan has a relative ping for those in the Americas of 150+ ms. When the premium version is released, those in the Americas who purchase it will experience < 80 ms.

Thanks,
NullifiedVoid

Almonds - April 23, 2018, 11:25 am

Interesting concept!

Will check this out..

Antichrist - April 23, 2018, 4:46 pm

So how anonymous is this exactly? Are you able to view our activities?

nullifiedvoid - April 23, 2018, 5:30 pm

(Apr 23, 2018 04:46 PM)Ozai Wrote: [\[CITE\]](#) So how anonymous is this exactly? Are you able to view our activities?

Hello Ozai,

It is anonymous as the user keeps it. Nobody can see a user's activities unless they share the randomly generated token in their URL. Also keep in mind that its the user's responsibility not to login into any sites containing Personal Identifying Information if their goal is to be completely anonymous.

Thanks,
NullifiedVoid

MoraXen - April 24, 2018, 1:10 am

This is interesting and I think never-seen-before. I am guessing it must have taken many working hours to put this together, so well done for that.

That being said, I really don't see the point to it. I mean, this is obviously useful to people who don't really know how to hide themselves on line. All the features (including the "reverse engineering malicious software" feature) can be achieved without third party assistance. Don't get me wrong, I recognize that it's much simpler to just use such an application and be done with it. I am just helplessly suspicious of third party applications, even if they seem as honest as you :)

I am thinking of trying this out, and based on all the positive feedback, I am certain I will enjoy the experience. I am just not sure If I will be using this since I have some disagreements with the whole philosophy of such applications, not necessarily with how they work.

Thank you!

Symbxlize - April 24, 2018, 3:04 am

Wowie. Sounds interesting.

nullifiedvoid - April 24, 2018, 9:37 am

Hello Deadpan,

Interesting train of thought, but wouldn't you say in the case of VPNs that just because you installed their software, does not justify whether or not your data is secure. At the end of the day it is whether or not you trust the VPN. If you do not trust SADD.IO that is completely fine and you are entitled to your opinion.

Thanks,
NullifiedVoid

(Apr 25, 2018 05:51 AM)Digibit Wrote: [\[CITE\]](#) haha man we are commenting on the same shit

Hello Digibit,

What information do you think would be logged? There is no purpose of making attempts to log a machine that will be destroyed in a 15 - 60 minute time span, especially when there is zero information on the user.

Unlike VPNs there is no need to collect any information about the users. When a user generates a desktop (virtual machine) they are given a randomly generated token. This token gives them access to that particular machine. Users do not have to register, purchase, or provide any information about themselves to use this service.

Since all generated desktops are routed through the TOR network, in what ways do you think a user could be identified? If user A and B is using SADD.IO what distinguishes the two from each other or other TOR users?

VPNs are great but the owners have the ability to look at any traffic coming through them. Again I must reiterate the trust factor.

Your VPN service looks great!

Thanks,
NullifiedVoid

(Apr 25, 2018 06:18 AM)Deadpan Wrote: [\[CITE\]](#) Yep, it's just allowing an additional vulnerability, an unnecessary middle-man if you will.

Hey Deadpan,

If you would not mind showing a proof of concept in regards to additional vulnerabilities, please post them here. We are interested in seeing vulnerabilities and will pay well for them. :)

We invite anyone to pen-test our systems!

Flu0z - April 26, 2018, 5:14 am

Aye,

I meant like

There is a plain ISP log of me going to your website on my end if I go to it, and if somehow they knew that the task I had done as used using your website they may get logs from the ISP / Server Provider you are using

I mean it looks like a good service, don't get me wrong at all, and it's probably very useful and I haven't seen anything like this before

I also apologies because I believe you had to register for an account and such and potentially pay in the future

nullifiedvoid - April 26, 2018, 9:32 am

Hey Digibit,

Its all good!

I have actually discussed the ISP situation with a user before. So lets imagine that the authorities has to do an investigation on someone.

Lets assume that the user is using the premium version (HTTPS for the desktops). The logs that the ISP would have would not contain the token identifier for them to access your generated desktop. All they would see is that you are using SADD.IO. Would be very difficult for them to identify what desktop you used. Also keep in mind the desktops get deleted within 15 - 60 minutes. Investigations take longer than 1 hour!

In regards to the payment system, when released, this is how it would work:

1. A user would purchase premium (or private) package.
2. The user receives an order ID.
3. The order ID will be entered on the site.
4. If validated a token would be generated.
5. The user will access their desktop using the token.

Note: The token and the order ID have no correlation. The order ID is just a validator. Order IDs can be shared but only one desktop will be generated at a time per order ID.

Thanks,
NullifiedVoid

Hey cyber_magnus,

Thank you for checking it out! I assume you are talking about The TOR browser? If so, that browser is actually not needed to browse to .onion sites since the generated desktops are already routed through TOR. Do not be concerned.

Free versions do not get updated as often as the premium service does. We will be pushing out some desktop updates for the free version within the next week. :) Enjoy!

Thanks,
NullifiedVoid

SIM-1073426 - April 28, 2018, 8:05 am

As always, never enter any real information and connect to the service by Tor. Never trust someone

with your information, no matter what they promise you.

nullifiedvoid - April 28, 2018, 12:10 pm

(Apr 28, 2018 08:05 AM)Aces. Wrote: [\[CITE\]](#) As always, never enter any real information and connect to the service by Tor. Never trust someone with your information, no matter what they promise you.

Hey Aces.,

That is a good way to put it! By placing SADD.IO between the user and TOR, the user no longer is exposed to the risk of connecting to TOR directly.

Thanks,
NullifiedVoid

Omniscient - April 29, 2018, 8:40 pm

I think there is some serious merit to this project. I like to see new projects like this gain traction here on HF. I gave it a try and seems to work pretty well. I have to spend a little more time on it in order to really give proper feedback but I think it's worth trying for everyone. This should fill a service void for some members.

DeejayBOi - April 30, 2018, 3:17 am

Was looking for something like this for a long time, i fuck with this!

nullifiedvoid - April 30, 2018, 3:19 am

Dae Kim - April 30, 2018, 3:25 am

i can create wallet with sadd.io ?

nullifiedvoid - April 30, 2018, 3:28 am

(Apr 30, 2018 03:25 AM)Dae Kim Wrote: [\[CITE\]](#) i can create wallet with sadd.io ?

Hey Dae Kim,

If you are referring to a bitcoin wallet, then you can use SADD.IO to create a wallet. Just make sure

that you store it somewhere (i.e. the cloud, email, etc.) before the desktop gets disposed of. Once a desktop is disposed there is no way of retrieving any data.

Thanks,
NullifiedVoid

SIM-1589588 - April 30, 2018, 3:38 am

(May 8, 2018 09:01 AM)wilgary43 Wrote: [\[CITE\]](#) Good stuff as per new thing but percentage of anonymity is poor when checked on whoer.net
Hello wilgary43,

Thanks for checking it out.

Whoer.net is not a good check for anything on the TOR network. Remember that you could be using a TOR exit node that other users could be using as well. Those nodes could have been up for years. This is why we tell our users not to login into something that could identify them if their goal is to be anonymous.

Also keep in mind that you will have different exit nodes every 5 - 15 minutes.

Thanks,
NullifiedVoid

ARIANA - May 12, 2018, 11:19 am

Just tested this, great idea and execution!

I can see this being a successful service.

Shlazam - May 12, 2018, 1:16 pm

Hello imamurloc,

Glad you had a chance to check it out! We are working to get things running faster/more efficiently.

Premium will be released within the next two - three weeks.

Thanks,
NullifiedVoid

ashwathama - May 25, 2018, 11:23 pm

Nice service just tried it.

But i see a lot of ways in with the free version can be exploited. Just for example someone can open multiple desktops (using the free version) and maybe run XMR (or some other) miner on it. I was able to do that.

So i guess you should add IP restriction to the free version (eg. A specific IP can access the service like 3 time a day, ik its not the best way but its something).

Nevertheless its a really nice service. Keep up the good work.

nullifiedvoid - May 26, 2018, 8:39 am

Hello ashwathama,

Thank you for giving the free version a try along with attempting an exploit.

However, users are free to mine whatever cryptocurrencies they choose on the desktops. If you as user do not want desktop slots/resources taken up by miners it would be ideal to consider the premium version where this cannot happen.

Thanks,
NullifiedVoid

IP doesn't even mean shit these days, same old VPN technology. What about browser fingerprinting techniques? and are these Ips blacklisted already (through what ever hosting solution you're using?)

nullifiedvoid - May 27, 2018, 6:59 pm

Hello Flacko Jodye,

Thanks for looking at the project. In an investigation, IP addresses with a combination of timestamps, and good evidence based off of subpoenas could actually mean a lot.

This project is not a VPN as it gives the user an entire Operating System that has no browser or internet fingerprint, to control. Browser Fingerprinting would be problematic as the OS is deleted after a specified time-limit.

IP addresses given to the Operating System are from the Tor network not a hosting solution so there could be a chance that some are blacklisted.

Thanks,
NullifiedVoid

creki - May 28, 2018, 7:59 am

Seems like a really cool project, but the delay between me and the server makes it really annoying to use.

So if you could make some EU servers close to Norway/Scandinavia I'd for sure use your service.

Only security concern that I can think of now would be if you ran some sort of keylogger/rat on startup for every VM and then send the data to your server before shutting down and deleting everything, other than that it seems like a great service.

Edit:

Then again it's the users responsibility to not link/type anything that could connect with them IRL, so it shouldn't be a huge issue.

Hello creki,

Thanks for looking at the project. Server selection is only available to premium users. However, in the first few weeks of our premium release we will only have a US server available.

The next premium server will be placed in the uk.

In regards to your concern about a keylogger, though we do not place any on the VMs. The user should protect their operating system from internet threats such as those themselves.

Thanks,

NullifiedVoid

WhiteHatHeathen - June 3, 2018, 9:24 am

Seems decent, but I'm not going to pay a cent to be anonymous.

9h05t - June 3, 2018, 1:07 pm

Is this different than anonymously buying an hour long vps elsewhere? Is there something I'm missing, because a self exploding vps doesn't get rid of the logs that are gathered from feds by ISPs. Also it doesn't address a complete compromise of advanced government malware they've been proven to deploy on onion websites. Perhaps capable of infecting viewing computers (we can't know for sure). Who knows if they can exploit modern VPN systems to unmask real information... so if I understand right this is a browser based VM/VPS rental that self destructs? Thanks for providing a nice free service.

nullifiedvoid - June 3, 2018, 2:57 pm

Also it doesn't address a complete compromise of advanced government malware they've been proven to deploy on onion websites. Perhaps capable of infecting viewing computers (we can't know for sure). Who knows if they can exploit modern VPN systems to unmask real information... so if I understand right this is a browser based VM/VPS rental that self destructs? Thanks for providing a nice free service.

Hello 9h05t,

Yes it is completely different than anonymously purchasing a vps from some place else.

A VPS is going to be owned by a company who more than likely keeps logs as well as their ISP. The VPS could also be compromised especially if a user utilizes Tor browser. Tor browser is still a browser, that means that it inherits all vulnerabilities publicly known and unknown of a browser. So the government could deploy malware onto the VPS through that browser. Also note that if the VPS is not disposed properly, the government could use forensics to reconstruct the VPS.

The government does not have to make attempts to compromise a VPN they could just send a subpoena to obtain all logs to aid in their investigation. Or subpoena for the crypto keys to decrypt traffic.

What SADD provides is rental, web-based, properly self-destructing VMs that use a Tor gateway (router instead of browser). By using Tor as a gateway the ISP of our servers cannot see what websites/servers our users visit. There is also no DNS leakage. Worst case scenario if malware was deployed on your VM from an onion website by the government through an OS/browser exploit, they could not identify the user by IP address like they would if a user was simply using Tor browser, because the IP address would be that of the Tor gateway, not the user's home connection.

Thanks,
NullifiedVoid

Hey cbdaeeeeeabc,

I suppose that this is similar except, where would you find a disposable computer? How would you combine Tails with a RAT? How would you do this remotely without getting caught?

I think that there is more risk setting this process up physucally than actually using this method.

Thanks,
NullifiedVoid

(Jun 10, 2018 11:30 AM)CurryFist Wrote: [\[CITE\]](#) cool shit dude but can the fbi still find out?
Hey CurryFist,

Thank you for your review. To determine whether the fbi could still find out we must think of all possible ways that they could. Lets assume the user does not put any personal identifying information on their desktop.

The FBI would have to first figure out which of our servers are doing something malicious. They would have to somehow get around Tor to do this. I have read about attacks where they exploit Tor browser. SADD does not use Tor browser, we use Tor gateways. So any type of exploit to the desktop would still return a Tor IP address.

In the worst-case scenario, lets say they are able to get a copy of one of our server's HDD. They would have to use forensics to obtain VM data. This would not work as we dispose of our VMs by overwriting each byte of a VM with random data.

The hardest part for them is saying that a particular VM belongs to a certain user.

Thanks,
NullifiedVoid

NullifiedVoid

Where they would succeed is correlation attacks.

If you are actively engaging with your computer at the same time that a VM is seen to be doing malicious activities from accounts possibly linked to you, they would be able to say that you are the one controlling it.

If, however VM you could set your VM to reroute others traffic randomly (over the internal internal network) for set periods of time before/after/during you actually control the VM then it would allow for plausible deniability of correlation attacks between your access to the site and the actions performed by a VM.

Even then it is a flawed system, but a concept worth looking into nonetheless.

henry - June 11, 2018, 9:28 pm

Interesting concept, I'll keep it noted.

.eXe - June 12, 2018, 1:19 am

Tried that free trial, this is damn awesome. Very clever idea.

Do they actually irrecoverably self destruct? Also, will you add more off-shore locations?

Hello Shitposter,

I believe that your scienario of correlation attacks would apply if the user is using accounts already linked to themselves. Also the outside entity who is looking for the user would have to know of these accounts. One of the things mentioned in both the video and website text is to not login into anything personally identifying. If a user plans to do something malicious, they need to not use any accounts that would lead back to them.

The scenario that you describe was seen when a student tried to do something malicious to a school server through Tor while on the school network. The problem was that the student connected through Tor directly and the network administrators saw that he was the only one connected to Tor when the attack happened.

If we remove the "accounts possibly linked to you" attribute then all the victim would see if a Tor IP address doing an attack. There is no way for the victim to know what type of desktop the SADD victim is controlling. Remember SADD allows users to use a VPN as their gateway instead of Tor. Maybe another good idea for the user would be to connect to a VPN or proxy before connecting to SADD.

So my advice to all users is to be as abstract from your personal life as possible if your plan is to do something malicious.

Thanks,
NullifiedVoid

Can I ask what other protections you put in place to protect the users seeing as anonymity is key, here?

What happens if we pay for an account? Are those accounts connected/logged against VMs, anywhere?

What happens if another user does something malicious and your datacenter gets subpoenaed?

nullifiedvoid - June 12, 2018, 7:43 am

Hey Evil.eXe,

Sure thing. So another thing we do to protect users from internal network attacks is place all desktops on separate VLANs. We also generate a Tor gateway (OS) with that VLAN making it difficult for an attacker to escape into the actual server.

When user's purchase premium, they receive an order ID. The order ID is merely a ticket that allows the user to generate a premium desktop. There is no correlation between the order ID and generated desktop.

If a server is subpoenaed the requester would receive a HDD which contains no desktops. The server has triggers to wipe incase of situations like this (i.e. turning the server off or tampering with specific files).

Although, it would interesting to see the government prove that one of our servers did something malicious as they would have to break Tor.

Thanks,
NullifiedVoid

Thanks.

And what's to say you don't watch what users are doing? It's virtualbox afterall.

nullifiedvoid - June 12, 2018, 10:14 am

(Jun 12, 2018 08:02 AM)Evil.eXe Wrote: [\[CITE\]](#) Thanks.

And what's to say you don't watch what users are doing? It's virtualbox afterall.
Hey Evil.eXe,

The token located in the url of the user's browser is how someone can view the desktop. These tokens are generated on the fly.

As far as server-side goes, we have permissions and locks in place to stop someone from viewing desktops. If an admin logs in, a wipe occurs and the SADD.io service is stopped.

Thanks,
NullifiedVoid

Killy - June 12, 2018, 12:36 pm

Looks very interesting.

How do you deal with law enforcement and potential charges / indictments?

nullifiedvoid - June 29, 2018, 4:06 pm

(Jun 29, 2018 02:23 PM)NextChapter Wrote: [\[CITE\]](#) Looks very interesting.

How do you deal with law enforcement and potential charges / indictments?

Hello NextChapter,

If we are ever contacted by law enforcement in regards to logs or copies of virtual machines we would simply not hand anything over. By design all of our systems wipe themselves forensically (overwrites files byte-by-byte) and we keep no connection logs.

Who are you referring to when you talk about potential charges or indictments? If you are talking about the users, then we have no way to capture who is using our service. Nor do we know what our users are doing.

Assuming that our users are not logging into anything that would identify them while using our systems, it would be very interesting to see Law Enforcement trace a user through Tor and identify them through our systems.

Thanks,

NullifiedVoid

Enronitis - June 30, 2018, 5:42 pm

Used this for the first time today-
Very impressed, very satisfied.

?Üta? - June 30, 2018, 5:49 pm

My main concern were logs and/or tracing for this but as stated above you don't track any of that. I'm really interested in this and will likely purchase this soon. Ill post back with a review when I play around with it a bit

NullifiedVoid

Peble - July 1, 2018, 4:56 pm

So what's the difference between this service, and just connecting to a low end VPS via tor and installing tor on it? I guess the disposable aspect, but other than that, just that it saves you time I guess?

nullifiedvoid - July 1, 2018, 8:32 pm

(Jul 1, 2018 04:56 PM)Peble Wrote: [\[CITE\]](#) So what's the difference between this service, and just connecting to a low end VPS via tor and installing tor on it? I guess the disposable aspect, but other than that, just that it saves you time I guess?

Hey Peble,

That method you described sounds secure, except how would you defend that VPS from exploits, risking infection? You may also have DNS leaks if you do not set the VPS up correctly. I would assume that you would use BTC or something similar to purchase the VPS.

Thanks,

NullifiedVoid

DaisyOdland - July 1, 2018, 9:02 pm

Gave it a try, really nice project. Only concern was that everything I typed was in CAPS and couldn't find a way to turn it off. My keyboard input didn't work to turn it off

Shorta - July 2, 2018, 2:25 pm

(Jul 1, 2018 02:30 PM)nullifiedvoid Wrote: [\[CITE\]](#) Hello ?Zero,

Glad that you enjoyed our service. Apponfly seems to only provide access to apps while we give users access to anonymous operating systems.

Thanks,
NullifiedVoid

Hello Shorta,

Thanks for your comment. We do not log anything as that would become a liability if we had some bad actors using our service ;).

Thanks,
NullifiedVoid
as much as you might be genuine, the case of "no logs" typically twists at some point.
Like the HMA.

kddf93 - July 2, 2018, 6:00 pm

This is awesome, can you customise the proxies beyond vpn support? I haven't really found much info in the thread on this.

nullifiedvoid - July 2, 2018, 6:23 pm

Hello Shorta,

There are really no twists here. Since users are not required to enter any information about themselves, we utilize the Tor network, and the desktops are forensically disposed of, how would

logging be of any benefit to us or aid law enforcement in an investigation by design? VPNs on the other hand have to manage their server networks, we do not, as we again utilize Tor.

The sadd.io webhost and its servers do not store any user data.

Thanks,
NullifiedVoid

Hello kddf93,

Do you have some sort of private network you would like all of your desktops to run through? If so, please email support or contact live chat.

Thanks,
NullifiedVoid

juulstar - July 7, 2018, 11:45 am

I gotta say, this is truly amazing. Great project, but I will tell you right now, people will abuse this service, I'm sure.

Is the VNC/VM that we are connected to completely wiped after the 15 mins/when we log off?

Also, could I run the desktop through a specific proxy instead of the TOR server? LMK.

Antisocial - July 7, 2018, 12:43 pm

This is a great service OP, definitely comes in handy.

nullifiedvoid - July 7, 2018, 2:09 pm

Hello ?????,

Thanks for using this service. Yes, the VM will be destroyed forensically when 15 minutes is up.

If you are wanting to route your entire desktops through another gateway, please contact support.

Thanks,
NullifiedVoid

Hello juulstar pepe!~,

This service does indeed still work.

Thanks,
NullifiedVoid

(Jul 21, 2019 12:22 PM)repl0it Wrote: [\[CITE\]](#) Does each session have a different IP? Does each session have different servers? Are IPs clean?

Hello repl0it,

Every session is routed through the Tor network, so whenever Tor decides to give a new IP you will have it. So all IPs may not be clean.

Thanks,
NullifiedVoid

(Jul 22, 2019 11:09 AM)Thelazygeek Wrote: [\[CITE\]](#) Its really interesting for us linux user i might take a quote for business plans thanks

fidusobe - September 17, 2019, 6:26 am

This all looks very interesting even though I don't know jack about this stuff but doesn't this kind of projects just kind of open up to black hat activities? Surely as mentioned there where there is good there will be bad as well all in all it looks quite amazing. Also as mentioned in the video once you have generated the desktop, theres no way of tracking down activities at all? I am just curious cause I find that quite hard to believe, hope to hear a reply from you.

nullifiedvoid - September 17, 2019, 3:30 pm

(Sep 17, 2019 06:26 AM)fidusobe Wrote: [\[CITE\]](#) This all looks very interesting even though I don't know jack about this stuff but doesn't this kind of projects just kind of open up to black hat activities? Hey fidusobe,

We would never say that there is NO absolute way of tracking down activities at all. It is all dependent upon the person and how they use the system. Correlation attacks will always be the enemy of anonymity.

We discussed a ton of different use cases in previous posts.

Thanks,
NullifiedVoid

aantoon1 - September 23, 2019, 11:28 pm

This looks like an awesome product, can't wait to use it one day when the chance is right!

Good luck with your sales.

Fugg - December 2, 2019, 10:10 am

I'm just confused how this deserves a patent? It's cloud based hosting with a web based RDP and traffic routed through TOR?

The prices intrigue me, and I like how it self destroys itself etc. I would like to see some privacy policy, information of how we know logs aren't kept, even though we are on the TOR network doesn't mean you couldn't be keeping logs.

Great project, don't think it deserves a patent as you didn't really develop anything new, you just made a great marketing idea for things other people made. Not saying you didn't code anything... but I think maybe you're looking for a trademark?

Ravioli - December 2, 2019, 9:04 pm

Hello Fugg,

Thanks for the comment. You are entitled to whatever opinion about the patent. However, you can patent the methodology of anything that you deem valuable and has not been created before.

The patent discusses how information is destroyed. SADD.IO works exactly as the patent states. We will add a Privacy Policy that tells you to look at the information stored on third party sites like Selly.IO as we keep ZERO logs of anything. The access token acts a validator to generate a desktop based off the time that the access token was purchased. (Within 30 days)

Trademarks are usually used for logos or image designs. Not actual code and the "wiring of things" to work.

Hey Mr. Robot,

We will try to fix the lag in the near future by adding more servers. Referral is idea but we have to figure out a way of doing it without identifying you.

(Dec 3, 2019 02:23 PM)Grim Wrote: [\[CITE\]](#) Agree! Would be cool if they offered a higher cpu core/RAM package. I understand that anything connecting to TOR isn't going to be as fast as a normal vpn connection but the hardware could be faster :)

Hey Grim,

Agreed. Thanks for the feedback we will continue working to improve our code and speed. We have updated the Whitepaper once more to explain how obtaining a physical SADD server would be more anonymous, private, and secure than how SADD is currently presented. A physical server would have no noticeable latency from client to server, but from the server to internet through Tor it will still have some delay.

Dr34dm0nk3y - December 4, 2019, 9:31 pm
