Found this site a while ago Its probably pretty known but for the people who don't know.

Go to <https://www.rabb.it/> make an account create a room and choose what you want to watch.

When you pause It will pause for any one else In the room.

Thought this was a pretty cool website and worth a share for those who don't know about It.

Yeah, rabb.it is a good one. Been using it since last year, I used to use that and stream my favorite kdramas since my net is slow that time. I also use it for reuploading files to another file host like pc games that has a slow file hosting.

I used to use this site with my girlfriend during long distances. Worked like a charm.
