Thread: [Pretentious - File Binder Source Release](#)

Donkey Death Jam - April 27, 2018, 7:32 pm

Pretentious

Written in: C#

Target framework: .NET 2.0 (shoulda used 3.5+ really o'well)

Description: Binds two executable's into one, writes both files on disc at launch and then opens the processes.

I am releasing the source of a free project I worked on a few months back. All it does is encode two file's bytes and then drops it onto the executing PC and runs both files. Pretty basic stuff; nothing special or too advanced. But if it helps anyone then it's worth posting. It's probably detected now, but I haven't checked so maybe you're in luck?

GitHub - Got suspended ?

Nice im trying to accomplish this is C++ but not getting very far xD

But definitely awesome of you to share this.

Chris.fussner - May 9, 2018, 2:43 pm

This is a very useful piece of code. With progression this could be a vey special binding tool. You should extend these features and give output file optionality i.e take a text file and make the contents bind with a stub in a format such as PDF or MS Word/similar.

That requires you to distribute a separate file. That partially ruins the point of using a binder in the first place.

Rough summary:

1.0 = win xp w/ SP1

2.x = lol hf

3.x = win vista & win 7

4.x = win 8 & 8.1 & 10 (& win 7 w/ update after SP1)

4.x w/ app config file = all (with a few version compatibility issues)

Link updated; for some reason my GitHub was suspended. It'll have to be on SendSpace for now!

Croll - May 26, 2018, 7:19 am

Any chance of a compiled version. I don't have a c# compiler installed :(

HQcryptorHQ - June 13, 2019, 2:17 am

Less pop-up ads on uppy.io also clicking on "allow notifications" on Sendspace will Hijack the persons browser... if you care ab this: more secure, less pop- ups, no malicious or mischievous executables

You can always use online compiler...

check here - <https://dotnetfiddle.net/>

@OP nice work...

I can no longer edit the thread to change the link unfortunately. Thanks though; it has been noted for the next time. However, I would hope most people have enough common sense to not allow notifications from random sites.

KaiMahn - July 12, 2019, 1:07 pm

Looks good, I will be using this as a way to pop my c# cherry
