Thread: [how to take control of a remote pc \(hack\) that is not in my local network](#)

Kiwix955 - May 4, 2018, 10:16 am

Hello all is in the title

to take control of a remote pc that is not in my local network in kali linux

Thx

Portforward your router or, better yet, use a DNS service such as DuckDNS or No-Ip. I'm pretty sure No-Ip would turn you in to the feds in seconds so be cautious, I have been out of the game for a while. Another thing to remember is when you are creating the payload/listener you need to use your remote IP and not your local one. Good luck.

I will try thx :)

I hope to succeed

Another thing to remember is when you are creating the payload/listener you need to use your remote IP and not your local one. Good luck. No-IP keeps logs and gives out info to the feds, yup. They also monitor frequently so you'll get suspended within 24-48 hours. I would just advise getting a VPN that allows portforwarding and doesn't keep logs.
