How is it laggy? No need to use more than shadowplay, unless you need to edit some shit.

If we're talking about the new shadowplay then nope, its sheit.

The vid is laggy, lots of frames losses. Literally freezing sometimes.

Are you high? The video is fine, my frames in game stay at a steady 160-180 when I'm recording lol.

If you don't know what you're talking about, don't comment.

I tried to watch it twice on two diff devices, yet it freezes.

Prob YT tho as it seem that nobody else has this issue.

Anyway, even with that, its kinda a useless vid. Who cares about only one ace from a nobody?

Also, the steam page at the beginning is kinda ridiculous, you can't even take 10 secs to remove that out of your vid yet you're so proud of it that you made a post there.

Sorry for being honest tho, it seems like you dont like it. kappa

There's no lag nor freezes. You just need some kind of glasses, I believe.
