Thread: [Kali Linux - Portable HDD \(Help \)](#)

raresrap - May 8, 2018, 6:44 am

Hey guys.

I'd like to ask if you know any Tutorial about how to instal Kali Linux on a portable HDD ?

I just bought one and I'd like to install Kali Linux on it so whenever I want to run linux I can, just conecting the hdd to the pc.

Thanks !

throhts - May 8, 2018, 6:49 am

Download Kali ISO and burn it to a USB, then put the USB on a machine, then boot the machine, and enter BIOS. Choose to boot from the USB, and from then on it's pretty much self-explanatory. Installing language, date, time, etc etc.

Keep in mind you'd have to have the HDD integrated before anything, because you're installing the distribution for the HDD.

I wouldn't think it would be any different than installing on a USB

So pretty much, I have to make a usb installer with linux and when I boot to choose the portable HDD as the one I want to install to.

And ofc I have to have the external HDD connected to the pc. Or do you mean something else by " you'd have to have the HDD integrated before anything " ?

I didn't mean anything else, nope. It's exactly what you said.

Ok. Thank you very much !

If I have problems, I'll reply here.
