Thread: [PHP Include causing error 500](#)

Honeybun - May 9, 2018, 2:10 pm

I'm a total noob to php, still learning.

trying to include air2.php in my index, they're all located in the same dir.

```
Code <html>
<?php
```

This is a test script for the On-Air System.

```
include 'air2.php'
?>
</html>
```

Whenever I load air2.php manually, it loads just fine.

ThomasGB - May 9, 2018, 2:18 pm

```
Code <html>
```

This is a test script for the On-Air System.

```
<?php include 'air2.php'; ?>
</html>
this should work for you
```

```
<?php include 'air2.php'; ?>
</html>
this should work for you
You're a real fucking G.
```

Anxuein - May 9, 2018, 3:46 pm

Just some clarification, you added "This is a test script for the On-Air System." in the PHP code. This is not valid PHP code. It looks like it is meant to be outside, judging by later responses, but if you do want to do comments in PHP, you just add // before.

```
PHP Code
<?php
// This is a comment
```

Nachfolger - May 9, 2018, 4:33 pm

You didn't include a semi-colon after the include statement. PHP REQUIRES a statement end bracket, unlike javascript.

```
Code include('page.php');
```

PHP Code

```
<?php
```

```
// This is a comment
```

I honestly have no idea how I missed this, lol.
