Thread: [Best website to learn web development, mobile development, application development???](#)

qbOFFICIAL - May 13, 2018, 1:48 am

Whats your guy's favorite website for learning languages in the realm of web, mobile, and software development?

Free or subscription based.

Examples: TeamTreeHouse, Codeacademy

.kr. - May 13, 2018, 2:22 am

My favorite Website: YouTube, Stackoverflow.com language Documentation and Google XD

VouchPotato™ - May 13, 2018, 2:38 am

Honestly(I know you won't like the answer), books! If you read a good book about any language + one about algorithms and take good notes, you're better than 95% of applicants for any given job.

The web doesn't have many filters for shitty information. A book will be written by very good software developers together and reviewed many times. Go take a look at O'reilley books.

Substansen - May 14, 2018, 3:20 am

Codecademy is pretty basic and a good place to start!

MoraXen - May 15, 2018, 5:19 pm

I really like [hackerrank](#), [edabit](#), [codecademy](#) and subreddits like [r/learnprogramming](#) and [r/programming](#).

You should always study books though if you want to learn the fundamentals. Hope I helped ?
