Introducing GPT Helper

The only bot that is available and works flawlessly on Android.
With GPT Helper you get a search bot and video bot for multiple GPT websites.

I currently have InstaGC, Gifthulk and Bing Rewards working but there will be more to come. If you have an Android phone check it out now in the play store you won't be disappointed.

6800 is equal to how many USD?

Abbaas - May 28, 2018, 3:12 pm

Hey thanks for the app, what do you think is the most profitable methode out the 3 you have listed.

\$5 USD PayPal every 15-20 days per account

Just for pushing 1 button a day

This is the only Bing search bot that does mobile and PC searches.

I think the best method is the Bing Search Bot combined with AppCloner. I have 6 accounts active and cashing out.

I have multiple videos of instructions for setup and usage along with payment proof just search GPT Helper on YouTube.

I have also spoken with Microsoft associates to find out if even using this app will get you banned and they told me the only reason you will get banned is if you use the same # on multiple accounts or if it looks like untrue searches are being made.

I have worked my ass off creating this app by myself. I hope everyone enjoys using it and remember to tell all your friends about "GPT Helper".

It works, but I when I enter the gpt helper app and Bing, it's redirecting to the bing search machine. Should go to the rewards page, or just login?

If there is anybody besides me that has cashed out using this app please let me know.

Not really trusting you since you have a rep saying you spread adware android apps.

Could you take a screenshot of that and also the app that I supposedly was spreading adware with. I have multiple vouches for being High Quality on Hack Forums.

I also looked at all your threads you have created.

Why are most of them of you looking for help with methods never any methods of your own to give?

Why slander someone's rep with false accusations?

Always with the takers talking shit.

I'm sorry but if you can't understand the thread then honestly you should not be using this app.

Just ignore this thread and move on to the next one.
