Thread: [How to make a program or DB to send Excel rows in email](#)

AnGrY Bo - May 17, 2018, 9:20 am

Hello guys

I have excel sheet with 100s of rows and each row I have to send it to different people
Is there away that I can add their email address in the cell on same row and send data on that row
Only

Thanks

Honeybun - May 17, 2018, 9:25 am

I recommend breaking the excel sheet down into a true sql database and going from there.

AnGrY Bo - May 17, 2018, 9:33 am

What I need is to build a program or database that i can impact the excel data into but no idea where to start really

If you're familiar with web based languages, you can easily import the excel sheet into a SQL database and use PHP to send the email out.

It would be rather simple, you just need to know PHP and how to build a few SQL statements. Or you can attempt to use Mailchimp, but I'm not sure it would work for your needs.
