Thread: [Crispy's iOS / Web / Bot Dev service - cheap](#)

crispy - May 21, 2018, 6:31 pm

Hi all, I'm offering a dev service to you guys for cheap. Drop me an idea, and I'll quote you :) I'll make sure to be cheap, but I get the job done efficiently with quality work, UI, and well-commented, clean code.

If you want to see my work, you can ask for it.

iOS

Price will vary by complexity. For example, if it's a two page app that doesn't require a cloud infrastructure and user authentication, it will be a lot cheaper than an Instagram clone. I'll charge you an extra 20\$ to host it on my Developer account on the App Store if you don't already have an Apple Developer account. (they cost 99.99\$/year)

Web

Simple web apps. I can do almost anything, but the quality of my work is going to be the strongest when they are apps that can be built in React. I can build almost anything in React anyways, so shouldn't be an issue. We can test codebase locally and I'll deploy live to a name cheap domain + hosting instance, or you can take the codebase and deploy it yourself. I'll also handle SSL with Cloudflare and everything.

Bot Dev

I can develop a bot for any type of messenger platform. Telegram, Slack, Github, etc. Let me know. Complexity of the bot can go as far as you want it.

Also, if anything is sketchy I can do a lightweight "vouch" for someone to prove to them anything.
