how to hack wifi router using wireshark or secureshell?...just for fun

You do realise that Wireshark only captures packets, right?

You're gonna need to get access to the WiFi before you can even begin dreaming about capturing packets.

The KRACK attack only allows you to view the data going through the network, not getting actual access to the router itself.

Why wouldn't you want to hack the router? Not sure what you're aiming for, the question was "How to hack WiFi Router" not "How to view data on it".
