after 5 consecutive lose your next bet will be 2500x your basebet (to recover your first lose), and in this point your loss is 625. so, if you have 3125x your basebet, you can survive every 5 streaks losses. with 15625x basebet you can survive the 6 streaks losses (and 75625x to 7 streaks, and so on). and every single win without losses worth 0,08x basebet. just think about it.

Working well so far. Playing with about \$20 in ETH, max loss set to 5. Will probably deposit more

ETH so I can up the max lost to 6 or 7.

Here's after a couple hours.

<http://prntscr.com/jpkeuk>

Not bad for running in the background I suppose.

Instagram - June 1, 2018, 8:28 am

Very legit method been using it and making some nice profits!

Nyx - June 1, 2018, 8:28 am

I've made a decent amount within 34 hours from running this script.

Started with 33k ETH (\$18)

However I did put it on 4 maxloss which could be considered "Risky" but the gains were much greater so I am pleased.

140k Net Profit is roughly \$80 profit from starting from \$18 with a maxloss of 4.

That's about what I put in, although I've mainly been chilling at maxloss 5, done maxloss 4 a little bit. I'm up 20k ethos.

I think the maxloss 4 would be OK to run most of the time, but idk it makes me nervous lol. I don't think I've ever lost 4 in a row but streaks under 1.25 do happen. I have definitely lost 3 in a row.

EDIT

Yup it finally happened lol

Maxloss 4, 64k ethos gone ???

Oh well, good while it lasted. Just a shit streak. I would have lost on my normal maxloss 5 too.
