Lamas are yet to be supported. They are on the list of features that are being added. Although Dev is prioritizing other things like menu/vis etc. 70% of guns are supported, along with their different color tiers.

Looking to purchase :) I'll dm you.

thanks for quick response. ill keep my eye out. also this works on mac book pro's?

Will you be selling a few day keys for testing purposes ? Would like to give this a try before deciding on spending that much for a weekly key. Not saying the price isn't worth it as spoofers themselves are costly. Hope you understand and if not I understand:)

The community is extremely selective, and in order to ensure that the program never becomes detected, day keys will never be offered. Every program that offers day keys is detected. PUBG and Fortnite, same thing.

There's a reason why it's this expensive.

I don't think it'll work on Mac, unfortunately.

Can vouch for this program as I am one of the people working with Confound. Great product - absolutely the best.

I am the one who works directly with the devs and I can guarantee you NO ONE else is selling this here. Period.

Any well-versed coder who has a true passion for this type of development won't be coding for one single person unless their private client is willing to pay them 10-15k+ a month if not MUCH more. Otherwise, it's not economical for them. The reason why I don't think you should worry about something like this, especially with these developers, is because firstly, they have a very high incentive to keep the program undetected at all times. But secondly, they are so skilled and dedicated that they're constantly changing presets every day so that their community is well taken care of. Lastly, there's a reason why it's this expensive - the number of people using it is not significant enough for there to be any issues with detection. Hopefully this post provides some useful insight.

If someone told you that - they have no clue what they're talking about. If you just assumed that - you have no clue what you're talking about. The PUBG hack we sold had over 1000 concurrent users for 9+ months and counting - NEVER detected.

That's a 10/10 and a wrap. This will get you into the Top of the Leaderboards. Possibly the most efficient cheat on the market.

**Swedish Viking** - June 8, 2018, 3:44 am

I am very interested, but jeez. The price is unrealistic, unfortunately.  
Feels like this cheat is only available to people with great financial status.

Nevertheless, I like seeing that this exists in a confident fashion.  
Best of luck with sales, I suppose!

**Nobility** - June 8, 2018, 9:59 pm

Quality 9/10

## Ease of Use 10/10

Took me a day or so to set things up with this but it was worth the money. The ESP alone is a great advantage, I've tried the aimbot but I fear it's too op but nevertheless it's a great dev team, one which you'll never see. So chances of a lawsuit are zero.

**mrbgray90** - June 8, 2018, 10:47 pm

Great customer service. Great Response Time. About to give it spin and see how things turn out. So far best money spent ever on the internet for a hack or cheat. 10/10 would buy lifetime if offered.

**MrHappy** - June 8, 2018, 11:27 pm

Over 15 people have purchased from me so far. haha

There's no need to justify the price. It's one of the most popular games in the world and to have a significant advantage when playing is worth quite a lot of money. especially when this is the best program on the market.

Just from checking that video and the guy's channel, it seems he's using the cheat to "promote" his YT Channel. He probably bought it off of here and has been using it since.

Otherwise... yeah, plausible he could've gotten it from somewhere else.

Based off of his recent video, it seems his main Fortnite account has been banned. Can't say if it was because the cheat has been detected, or if it's due to his openness with the cheat.

I can vouch. Bought it a few days ago and it's pretty awesome. The ESP sometimes doesn't show people until they are right on top of you but the aimbot is dead accurate. I have to tone it down to look legit.

**XeCheats** - July 28, 2018, 8:36 pm

Been using this almost a week now and no bans, lasted longer than any other cheat yet ill leave a massive vouch if it lasts till the end of my subscription without doing bus kick thing, (an account ban can be expected cause i rage alot lol)

**SIM-3777840** - July 29, 2018, 11:01 am

HUGE VOUCH.

I have tried multiple cheats, and by far my favorite and most reliable to me is Confound's.

The Aim bot with the smoothing, it dead on looks legit as can be, I find it to be the best I have tried, there is no weird tweaking for me, I have the recommended censtivite and as well with smoothing and works wonders!

It even has a prediction for people running as you try to snipe, its pretty solid, of course its not 100% its a prediction and it works!!

ESP is solid, the characters always appear for me, box's match with Skeletons!  
ESP items shows every gun for me, even the new new compact!

Overall, they have amazing support, and amazing people working together!  
I would recommend this to anyone who is interested in buying something like this!

I know I'm new here but this is 100% the best Fortnite Cheat you can get your hands on. Fast and easy setup, great customer support, and not to mention a great esp and aimbot. Looking forward to a long future with this team.

**XeCheats** - August 4, 2018, 6:43 pm

I think it is time for some quality vouching.

I bought this cheat about 3 weeks ago and it has been working amazingly and whenever problems come about, the staff are always ready to fix them.

There are some things that could make the cheat aloooot better however:

#### ADJUSTABLE OPTIONS

-FOV (It is almost detrimental when you are up close pointblank with an enemy, you are pretty much dead if you lack the skill to aim at the head and lock on) if the aimbot targets enemies without needing to aim at the head as much it would save you in those dangerous situations, especially when starting a game as you have to strategize more by hiding at more of a distance to pick off enemies. Although it is easy to kill enemies up close, if you dont get the lock on to them you are ripped.

-Visible Checks (Another thing that can mess you up if there are lots of enemies around, nothing is more of a Rlp then a close up enemy spamming their smg and then you start locking on to people 50 feet away)

-Not aiming at downed enemies (Same reason as the second, with all three of these combined, it is basically maximum rekage)

-Nospread (I know it is possible, I have used a hack with it before, however this cheat actually has the luxury of extremely low detection rate)

#### BUG Fixes:

Yellow colored items not being drawn (any yellow colored items in game are not shown in esp)  
Aiming at dead enemies [Temporary until body disappears] (this could be fixed by possibly checking health of an enemy?)

Overall this cheat is extremely high quality. Definitely lasted longer than anything else I have ever used and purchased
