Thread: [i can't find phpmyadmin url](#)

r3el - May 28, 2018, 4:04 pm

i have the backup of my target with wp-config.php file
and host is : localhost
so i cant find phpmyadmin to login to the database, there is anyways to find it ?

WhiteTiger. - June 2, 2018, 6:33 am

Do you even know what localhost is...?

Charger - June 2, 2018, 6:34 am

They probably don't have it installed.

I think he does, that's why he wants to find a locally hosted DBMS.

This dude has spams multiple threads and even after being given the answer argues and posts another thread.

Ok so OP is trying to hack his university...

He found a php file containing username: password: db_user: localhost. Now based on this he thinks he can hack them and i said no you would need to be on the local network. And because of this OP began lying about me on another thread until i posted evidence between myself and OP....

Dont waste your time on this idiot.

Not all websites have links to phpmyadmin, most manage their database from cpanel, and since it's a wordpress website i doubt it has a link to phpmyadmin cause wordpress is a cms and everything the admin needs to edit can be done in the /wp-admin folder, one thing you can try is reverse the ip of the website you got the db and find other websites hosted on the same ip or server, if you're lucky you'll find phpmyadmin on any of them or you find a vulnerability on one of them then upload Adminer.php, then you can connect to the database as it's the same server

kainzerdick - June 2, 2018, 2:34 pm

It is a wordpress.. so you don't need to find the phpadmin url.. :)

if i dont need the url , what i need ?

kainzerdick - June 3, 2018, 10:14 am

Use your mysql console or workbench.. use the website as host (remove https://www.)

Note:

This is not 100% working, it depends on the configuration of the server.. If you cant access then move on and find another one..
