Whats the best C# Windows Form theme should i buy?

Comment below what you think ;)

Snowfox - May 28, 2018, 9:37 pm

Am not really sure what would be the best theme to purchase.

But, there are lot of good Vb.net themes(you can add the reference of these dlls to use in C#)

Hi,

I'm sorry my answer is little bit off topic but it's my advice, Try to move from C# Windows Form approach to C# WPF (Windows Presentation Foundation) approach.

WPF has powerful styling and skinning structure and easy to create an own look and feel and It's very flexible so you can redesign your own controls without buying new controls or themes.

XAML which is part of the WPF (lets call it the design language ?) makes it easy to create and edit your GUI, and allows the work to be split between a designer (XAML) and a programmer.

It's took me 4 years until I finally made the move, And I regret everyday I worked with windows form.

With WPF you will never buy a theme or even a UI control.

Decim - May 30, 2018, 12:17 am

I don't understand why you would even think this is a valid question.

I would suggest moving over to WPF model due to it seperating the business logic from the design.
It also uses a styling language called XAML which makes it super easy to design you application, create custom controls and so on..

If you do decide jumpin on the WPF train I would highly suggest looking into MVVM (Model View View Model) which is a great design pattern.

That being said, I hope you find what you look for and that you'll have a great day!

i recommend wpf, too

it's easy to learn and very handy to write windows as xaml

Skofos - June 14, 2018, 4:47 am

feel free to choose C# theme in this forums or you can create your own xD

gky159 - June 15, 2018, 2:22 am

you can try bunifu its looking nice and very easy

?DiViN3 - June 15, 2018, 1:59 pm

There is a free to use open-source library for exactly that: <https://github.com/DarkByte7/VisualPlus>
