Thread: [Spreading on torrent sites- query](#)

Louisn8 - May 30, 2018, 3:48 am

Hi Guys,

I am unable to create an account on Pirate Bay, Once i click sign up nothing happens.

I am also unable to upload torrents onto kickasstorrents. I can sign up but when i attempt to upload a torrent the page just refreshes, similar to when trying to sign up to piratebay.

Any idea on why this is?

If you are having the same problem, could you please recommend any sites for torrent spreading?

Thanks in advance!

I would say its not worth the effort, youd need a seed box to effectively do it and accounts that post infected downloads get nuked pretty much almost instantly.

This aint the 2000's anymore dude.

Cheers for the response. I thought torrent spreading was still pretty effective, please let me know if you have any other alternative methods.

But consider the following.

Doing the "Good old traditional methods" is no good anymore.

Your not building a log cabin using a tried and time tested method to construction. Your trying o maliciously infect people.

That being said, you are dealing with some of the most state of the art protective measures ever seen to date.

Soooo... if you want success you gotta start thinking outside of the box and get creative.

Put yourself into the minds of your victims. What would you download and open? What would you want from the internet? What would you trust?
