Thread: [Free Fonts - Download \(212 Fonts\)](#)

Jarymaine - May 31, 2018, 6:28 am

Hello, the goal of posting this free font pack is to stimulate development and creation, and to provide a free and open structure in which fonts can be downloaded easily for personal use. There are 212 free fonts all inside of this folder. These fonts I use personally. They are all 100% free.

The number of fonts that I have installed on my PC are kept to a minimum. I have noticed that installing many fonts slows down my PC.

I store these fonts on my external hard drive, in a folder named "My Fav fonts". Whenever I want to use a font, then I install it to my PC. (Control Panel > Fonts)

You should avoid installing all of these fonts. Save them onto an external drive or folder, and only install them [Control Panel > Fonts] when needed to prevent your computer from running slowly.

Caution - Windows users

About one or two out of the 212 fonts are heavy to load and may crash or freeze the windows font viewer.

You should avoid previewing it before installing it (do not double-click on the font file, but right-click > Install)

You can go to the "View" tab and layout the files in "large" which will show you a small preview of the font without having to preview it.
