How can I get cookies from whatsapp web?

For example, I am now logged with my account on whatsapp web with google chrome
I want to put whatsapp web with my account on firefox without scanning again the QR
Is it possible?

I tried to use editthiscookie but it can't find any cookies?

Is there a possible method to "extract" an account from a browser and putting it on another browser/pc(without scanning the QR)?

Thank you

I'm afraid not.

(Sep 3, 2016 09:33 AM)vaibhavyawalkar Wrote: [\[CITE\]](#) Web.whatsapp.com domain does not use cookies. instead it sends browser and device identification data to server, which is validated on server side and if association is found to any whatsapp account then that device gets logged in. This identification data also includes time since installation of chrome at the time of first sign in, hence if you uninstall and then reinstall chrome, identification data doesn't match.
