Thread: [\[Re-question\] Passing form value](#)

PH_Trick - June 3, 2018, 10:05 pm

I am Korean.

You are currently using Google Translator.
Sometimes the sentence is wrong.

Many people answered in the previous article. However, I do not think that I can express it properly, so I write it again.

img URL : ibb.co/bBoYTT

cs file (server class)
[Server Properties]
public string command {get; set; }

[B Form]
"server.command = value"
[Command transfer]

It does not flow as desired.
(Do not deliver.)

I want to know how to transfer data.

CodeAssassin - June 4, 2018, 4:12 am

Raise an Event or use delegates and events.

<https://docs.microsoft.com/en-us/dotnet/csharp/programming-guide/events/>

To pass the information on

0xDEAD10CC - June 4, 2018, 8:19 pm

Transfer data? Pretty broad.. How about just post your code. You'll end up asking a million times at this rate if the only clarity you can provide is a filename and a property. A file doesn't receive the data, that's not a logical flow diagram either.

- Same process?
- Multiple process?
- TCP/UDP?
- Between classes?

gigajew - June 5, 2018, 2:45 pm

I'm sorry, like 0xDEAD10CC said nothing you said made any sense because there's no context. The picture doesn't make much sense either.

PH_Trick - June 6, 2018, 4:17 am

Is Skype messenger possible?

My Skype : live:dbsolution_4

just post the code and make it easier for any lurkers.

0xDEAD10CC - June 8, 2018, 8:39 am

Yeah I'm not going on skype. If people can't describe their problem here how is skype going to be any better?

I can not upload the source code because my rating is not high enough.

I will leave the image URL.
