Thread: [Best botnet with hidden VNC feature](#)

spownkey - June 6, 2018, 6:42 am

Hi guys, could you tell me what is the best bot actually with working hidden VNC module, i know from reading some articles that this is one of the most complicated malware features to code, in another hand this feature could be replaced by the combination of client web fingerprint + cookies + stored passwords & a reverse proxy feature to use the client ip, is there any tool made especially for this ? and when getting the webfingerprint what is the tool that i can use to clone it and use it with the appropriate cookies, fraudfox or similar ?

Hailstone - June 6, 2018, 8:06 am

Look on exploit.im even though a real one is going to cost you probably more than you can afford

qdawg - June 6, 2018, 5:24 pm

I mean i had a linux rat with vnc once but i guess thts not a net :(

inyourmemory - June 7, 2018, 10:02 am

One HVNC is sold on exploit for 2500/Month

Google Translate plugin

TwitchServices - June 9, 2018, 5:23 am

hVNC is not that hard to achieve. (CreateDesktop and a Socket session is more than enough - though in Win 10 it is a bit harder)

Prices can range from 500\$ - 10k.

Exploit is a good source for bots.

inyourmemory - June 9, 2018, 6:46 am

Wrong. Coding HVNC is one of the most complicated things you could do since you need to implement your own window manager and mess with alot of injections

Well it is obviously not an easy task for a new coder nor a person who is not familiar with the Win API.

Sirhofiio - June 9, 2018, 8:11 pm

i saw a good hvnc on bhf about less the price less than 1k

check

Do you mean exploit forum ?

(Jun 7, 2018 10:02 AM)Win64Worm Wrote: [\[CITE\]](#) One HVNC is sold on exploit for 2500/Month Too expensive price, even though I think that a stable one deserve such a huge subscription price and the ROI would be higher.

Thank you iam checking it, seems there is no a lot of reviews.

Mr_Bot - June 11, 2018, 10:27 am

CreateSession, switch session desktop, run your app, send back capture and send your control.
Done

If your goal it's just for run a app and use it remotely fully hidden.
And the computer can still be used in a normal way.

That's not how HVNC works, you first need to code your own window manager and a lot of other shit, after that you inject into every process (requires 32-64 bit compatibility) and send data to commander

Mariekiz - June 11, 2018, 11:22 am

On exploit there is one for 1250\$ a month

Pretty sure injection is not needed, only creation of a new explorer.exe.

You need to inject into each process that is spawned under the new explorer.exe

caxmd - June 12, 2018, 4:44 am

hVNC hide stealer C&C. 300\$

its hard to make hVNC on HTTP botnets. RATs is alot easier because you can just stream the screen's image bytes

Rat has remote desktop not HVNC. Lmao.

What he's describing is remote desktop.

Saying a RAT has no HVNC is ridiculous.

Didn't Ozone have HVNC?

Not to mention, Orcus has a HRDP plugin (or had idk, never used orcus), Luminosity had HRDP built in, as did Imminent Monitor....

Use The RDPWrap library on github OP.

It has issues with Windows 10 Home because of Microsoft restricting access to certain things (Policy Editor, and allowing RDP connections as examples.), but that can be fixed by dropping a DLL into System32.

<https://github.com/stascorp/rdpwrap>

Your next step after implementing this and hiding that GUI, would be to make a new user on the PC, then you have Hidden RDP.

Does that work enough for you?

Does that work enough for you?HRDP != HVNC

I did not mean that no rat has HVNC, however he described remote desktop.

HRDP creates new hidden user (Not very stealthy and also uses RDP traffic which can be detected) and HVNC new session using CreateDesktop, injects to all running processes and implements own windows manager. After that you are able to do work on users computer in stealth.

jcbullet - June 12, 2018, 2:18 pm

Not sure about hidden VNC but one could punch a hole in the router via UPNP and then have a silent vnc install script bind to the UPNP ports. How would you connect if the host does not support port forwarding ?

micaiahx - June 28, 2018, 2:23 am

Here is GrinGO HVNC thread

<https://hackforums.net/showthread.php?tid=5854840>

Please check my details in my thread.
