Thread: [PolyPE - Polymorphic Packer | C/ASM | Private Stubs](#)

0x0F0C - June 8, 2018, 9:51 am

PolyPE

The Polymorphic engine will generate almost 100% different files and that will prevent cross-detection and make each stub unique

Features :

Loader :

- ? FUD Injection Method
- ? Coded with C/ASM
- ? 30-150 KB Size
- ? Dynamic API Calls
- ? UnHook of Inline/IAT/EAT API Hooks
- ? Bypass API monitors
- ? Pump After Execution
- ? Long FUD Time
- ? Unicode Support
- ? FUD Startup

Polymorphic engine :

- ? Completely Unique Stubs
- ? Randomize Junk Data (writable and readable)
- ? Randomize Debug information
- ? Randomize APIs
- ? Randomize Relocations Table
- ? Randomize resource Data (version /icon/string table)
- ? Code Generation (functions,function calls,loops,jumps,reading/writing to data sections,API calls ...)

Compatibility :

Most Native Files.
Does Not Support .Net

Screenshots :

DISABLE MALICIOUS ACTIVITIES : disable some runtime detected behaviours by AVs.

SELF-DESTRUCT = MELT

i will keep selling this as long as there is a demand on it.

?

0x0F0C - June 18, 2018, 1:38 am

All customers stub are FUD since 11 days.

if one get detected , it won't affect the other stubs of a customer nor the stubs of the other customers.

?

sonictype - June 18, 2018, 7:37 am

only with 5 private stubs are for sale ? :)

thanks

Just as a note I don't mean to sales trash:

I was just going to say I think you should lower your price, maybe you can charge that much when you get R3kt or something but for now you literally just bought a \$20 rank on HF hoping to get like \$250 PER SALE!!? Its kinda a joke in my eyes, Polymorphic encryption is easy.. Sorry again I really

don't mean to sales trash, yet I cant say anything since I have had huge problems with my service, including putting sales on hold for 24 hours... So my advice to you is just to lower your prices just a tad bit (alot) and just play it cool... I'm not sure how good your stubs are, you say they are private but I guess anyone could say that about a stub if they change one letter.. Maybe, if your up for it I can give you like \$20 for one of your used stub source codes/unfud source and I can leave a review? I seriously don't mind but PM me if your up for it or something..

EDIT: I thought maybe I could give you one of my unfud codes for yours? That's if your up for it..

If you mean by "Polymorphic encryption" a changing of encryption key/algorithm of payload, that's not the case of my crypter of course.

I mentioned in the thread what's the difference between stubs , there is no cross detection between them.

The price of the crypter is based on the quality not how much i bought my l33t.and fyi,mine is cheap compared to the ones from same kind in HF or other markets.

?

SploitEXE - July 9, 2018, 1:52 pm

Good, at least you have HQ Stubs, but one last question why have HQ Stubs when you can do it simply with C++ (I wont give any methods away even though most are public anyways) I guess you could say long lasting FUD? But then you can do that again with C++ and certain methods that are simply achieved with a variant delay/other types of encryption based on USG per file.. Like a USG but for EVERY computer you send the file to, Eg. I send a EXE to "Bob" he downloads it, that EXE goes to a server/pastebin and downloads a unique version every time someone executes, like changing the variables, nothing complex, not like a whole new obfuscation, then bob's computer executes the code from the unique stub from pastebin (All of this is done in memory then dumped instantly) and then AV's can make a hash detection, so it just recognises a "bad/malicious" hash, or other methods with signature detection's which means your method is now detected.. but then the first paste could be linked to multiple methods of different pastes? Anyways this is getting long, but that's just a simple method I USED to use, not any more since some AV's are picking up on the link's but rn I'm putting full effort into the variant delay! Anyways I hope I have given you some ideas and advice! Your choice if you take it or not but that's it from me! Also there are paste bin bots posted around random places, Its good if you get your hands on one, since I use mine alot (Well used to)

Armitage44 - August 1, 2018, 1:18 pm

Thought I would post a review for PolyPE, I'm by no means bashing any other products but I've tested the following:

Cyber-Seal basic (no private stubs)

ALPHA Products

Bits and Bytes

DESTRUCTION crypter

DarkEye Basic (no private stubs)

usually bouncing between Netwire and Revenge RAT with my goal to bypass Windows Defender for a special project. Needless to say with all the tutorials and logo changing and assembly tests the closest I ever got was a couple in Run4Me saying it was runtime safe and scansafe in antiscan. I decided to pull the trigger on 0x0F0C's service with PolyPE:

Customer Service: 5/5

0x0F0C answered my questions, no BS, no rudeness just pure professionalism on Jabber. He responded within 5 minutes of me contacting him. I let him know my goals and he provided proof that PolyPE is what I was looking for. I purchased the 5 stub pack from him and as soon as the confirmation came through I had my License/files and was up and running in 5 minutes.

PolyPE Software: 5/5

GUI - Clean and to the point, it has all the features you need but no bloat

Features - Nothing crazy on the features, but they aren't needed. The basics are included such as assembly, icon changer, startup, file pumper

Usability - Trust me when I say PolyPE is the best crypter I have touched and at the same time a monkey could use it. There is no "Keep trying 50 icons and 50 assembly combinations if you get positives. By default PolyPE will even select good icons/assemblies for you if you leave it blank. Seriously just pick your stub and click build.

PolyPE Performance: 5/5

I don't have enough posts to post links to scan results but after leaving everything default and building I ran the following:

Run4Me Runtime Scan - 0/12 detections

AntiScan.me - 0/30 detections

I setup a Windows 10 VM with Windows Defender (Real-Time Scan/Cloud Scan) on no auto reporting and it pretty much chewed up every other file I had crypted the past couple days. Including ALPHA, Cyber-Seal, DarkEye, DESTRUCTION, Plasma Crypter. Using Netwire for native and Revenge RAT for .NET. I had some mild success with DarkEye getting the file on and running with Netwire but it was eventually detected a day later.

PolyPE had no issues with detection from WD and continues to run right now.

Cost - 4/5

Considering DarkEye is \$225 for a private stub and Cyber-Seal is \$300 for 3 months 1 private stub, PolyPE is not bad for 5 stubs if you can afford it.

Conclusion

I wish I stumbled on PolyPE before wasting so much money on all the other ones, if you are looking for a serious crypter then PolyPE is quite hard to match. One thing I've learned is you get what you pay for when it comes to crypters.

FADED2003x92 - August 2, 2018, 4:53 am

If you add binding capabilities, I'm buying this

bitcoin1399 - August 3, 2018, 9:03 pm

How long is 1 stub fud if used to spread a lot? Can it last or will it get flagged fast if spreading with to many people?

and also agree, add file binder please. Will try to purchase this soon

powergang0903 - August 4, 2018, 5:21 am

hello, i send you a request on jabber, can you answer me
thanks you

Universe_X - August 9, 2018, 12:40 pm

All right. Let's give this one a go. Nucleus wasn't good for it's price, hopefully this will be. 0x# your jabber isn't allowing me to send you a PM because I am not in your friends list. Please respond to my PM on here.

Armitage44 - August 11, 2018, 9:58 am

0x# is usually on point but I haven't been able to reach him either for response. I have not spread my stubs at all maybe 1 test PC outside my network and anything done with PolyPE currently is 1/30 with Eset detecting it on Scantime/runtime drop now. Using a multitude of Icons/Assemblies or the generated icons.

Edit: Within 10 minutes of seeing this post he contacted me with a new stub that is completely FUD 0/30 on antiscan and 0/12 on run4me. 10/10 customer service Jabber messages must have not gone through. Highly recommend his service for price/quality after trying every other crypter around here except NTCrypt.

SIM-297220 - August 11, 2018, 12:18 pm

really cool guy , fast respoding

0x0F0C - August 14, 2018, 4:47 am

-Fixed Startup detection of Panda Internet Security.
if i didn't respond in jabber within 24h contact me in PM.

3DES - August 14, 2018, 10:34 pm

Is Unhooking the only way used to bypass hooks?

0x0F0C - August 15, 2018, 2:35 am

(Aug 14, 2018 10:34 PM)3DES Wrote: [\[CITE\]](#) Is Unhooking the only way used to bypass hooks?
in my crypter it is, but there are plenty of ways for sure .

tomas14 - August 21, 2018, 9:21 am

This Crypter is the best on HF !!!!!!!!!!!!!!!

I recommend to everyone !!!!!!!

johnkim2014 - August 21, 2018, 2:36 pm

posting to come back later

0x0F0C - August 26, 2018, 12:49 am

still up for sales.
limited spots available.

avalanche - August 27, 2018, 3:04 pm

how good is it at the moment? is it still going tru

tdoxent - September 2, 2018, 7:00 am

So you're crypter can encrypt such an old file like DC rat which is runtime detectable, but you can not encrypt net files? Which is harder? Wouldn't Net be easier to encrypt? Isn't DC net anyways?

No way such an outdated and not function rat would be easier to protect than newer rats. idk your thread makes it look easy for you to protect yet your lack of support for net makes it seam you are lazy and only want to protects easy, supposedly managable rats which only native supplies. Well how come there are still crypters i've used before that encrypted net perfectly and bypassed all av's for only \$30 yet yours at \$350, only supports native.

Because the shit you buy for \$30 doesnt pass runtime. Their injection mechanism may not support .net.

Because C has no dependencies like .NET does (you can execute it on any Windows OS), the runtime quality of this crypter is better than the current ones on the market for \$30 and the stubs are unique (used only by you) but you can already read that yourself on the first page.

(Jun 8, 2018 09:51 AM)0x0F0C Wrote: [\[CITE\]](#) PolyPE

The Polymorphic engine will generate almost 100% different files and that will prevent cross-detection and make each stub unique

Features :

Loader :

? FUD Injection Method

? Coded with C/ASM

? 30-150 KB Size

? Dynamic API Calls

- ? UnHook of Inline/IAT/EAT API Hooks
- ? Bypass API monitors
- ? Pump After Execution
- ? Long FUD Time
- ? Unicode Support
- ? FUD Startup

Polymorphic engine :

- ? Completely Unique Stubs
- ? Randomize Junk Data (writable and readable)
- ? Randomize Debug information
- ? Randomize APIs
- ? Randomize Relocations Table
- ? Randomize resource Data (version /icon/string table)
- ? Code Generation (functions,function calls,loops,jumps,reading/writing to data sections,API calls ...)

Compatibility :

Most Native Files.
Does Not Support .Net

Contact him on jabber.

blitzblitz001 - September 11, 2018, 12:32 am

I added you on jabber . I'm highly interested in this crypter

webmaster34 - September 13, 2018, 4:51 am

Hello,

I want to get your private cryptor.

When you be generally online to talk?

true - September 13, 2018, 6:32 pm

why is he banned?

is there thread?

tomas14 - September 27, 2018, 3:42 pm

I using this for a month is the best for HF Long time FUD 100% best and fast support, work perfectly !!!!!!!!!!!!!

I recommend it to anyone who is looking for HQ product

rm4453 - October 16, 2018, 6:51 pm

Can anyone please help me understand why a polymorphic crypter is better? I am trying to find the best crypter so I don't have any issues down the line...

chickendad69 - November 6, 2018, 4:05 pm

Hey man, I've been trying to reach you for a week now. I would like the renew the crypter. I am a loyal customer, you must remember me :D Can you please activate PM so I can pm you?

tomas14 - November 7, 2018, 4:52 am

He has been trying to contact the owner of the crypter for two weeks, but to no avail. Is it possible to buy this crypter?

Aquatico - November 13, 2018, 2:37 pm

Don't even think about it kid, if i knew you were on PolyPE... you would have been banned longtime ago :)

you're just lucky.

3DES - November 15, 2018, 12:10 pm

it's not the case, i personally know the owner & this kid started shitting on us when we just started. whatever, this is a sale thread so let's leave it alone.

tomas14 - December 6, 2018, 5:19 am

PolyPe Crypter is active? Im interested to buy it.

jude william - December 26, 2018, 2:49 am

Hi mate can this crypter work for formbook? and please anyone that have test it on formbook you can as well contribute.

aerohacker - February 7, 2019, 6:32 pm

Unhook inline are Rootkit features?

Vloner - February 23, 2019, 8:11 am

Do you still sell these private stubs?

smokey1 - March 4, 2019, 10:54 am

it seems like a dead tread with positive remarks. if the owner been banned by HF he shld find a way to drop a sales link

Eagle 95 - March 5, 2019, 11:02 pm

Your sales thread is not compliant with new marketplace policy located [here](#). Make sure to read the whole thread before asking any questions as many additional questions have been answered. Also, your sales thread is closed permanently. Do not PM me to open it. Please familiarize yourself with newest policies and make a new thread if you still want to sell this that follows [new policy](#).

Thank you.
