Thread: [Sentinel Vs Agent Tesla](#)

kinsella - June 9, 2018, 2:55 am

I discovered that Sentinel and Agent Tesla are the most popular keyloggers on HackForums

Which one of them would be a worthy investment?

And which one of them is compatible with most well known crypters

Thanks

B FOR BADASS - June 9, 2018, 7:35 pm

You should check out both and read reviews and working, functions, price etc

Then make a decision on purchasing any keylogger.

Thanks

wow , a keylogger !

Gordan Zadro - June 22, 2018, 4:03 pm

I suggest Agent Tesla. . You can go for that

kinsella - June 24, 2018, 6:12 am

(Jun 22, 2018 04:03 PM)Gordan Zadro Wrote: [\[CITE\]](#) I suggest Agent Tesla. . You can go for that
Why do you recommend Agent Tesla?

What advantage does it have over Sentinel?

Bob_Ross - June 26, 2018, 6:16 pm

I would honestly recommend Agent Tesla because the owner isn't looking for a quick way to make money. I got the 6 month package a while ago and the owner is very responsive to bugs and updates frequently which is very good because it is fine tuned. However, the only downside is the crypter that is built into the keylogger. As each package uses the same stub I believe, which means it gets detected fairly quickly, which is no surprise and you shouldn't be relying on the inbuilt crypter anyways. They've got very unique and advanced features such as closing certain specified web pages. and more.

I've used sentinel before it was sentinel. It was autolog before btw. Just re-branded. Now there isn't

much different from the two, autolog and sentinal as I've used both in the past. The main feature is the persistence. It is very hard to remove, almost impossible. However, sentinel is extremely buggy. Unlike Agent Tesla, Sentinel hasn't been updated in almost half a year. You can see their changelogs. You have to get the correct settings on a build for it to even work, and even then it will crash sometimes on the clients pc. It would restart itself, but it was fairly noticeable when it would crash.

They're both good pieces of software, but if you're looking for reliability and support, I would go with Agent Tesla. There are only so many things that make a keylogger a keylogger.

Thank you.

This is a very unbiased response and you have stated nothing but the truth.

Everything you have said about sentinel is true. It hasn't been updated in a long while, the owners have almost abandoned the project, and they just use one person who goes by "DamienVC" as a front for support and he is barley active.

I tested the stub on my second computer and it crashes and gives an AutoIT error at restart.

Thanks for this Unbiased response.

AS regards Agent Tesla, does it send the keylogs/recovered passwords to email like sentinel or it is viewable in the Agent Tesla admin panel?

Thanks

DamienVC - June 27, 2018, 4:32 am

Hey, updates have been released, but the changelogs have not been modified yet. There were countless times updates (as well as new exploits) were added to it.

The crashes that used to happen were mostly due to using AntiDebug (which is enabled by default) on existing VMs/VPses or by an irregular build config (usually happens when the builder is not ran as admin, it does need certain permissions to build). Bugfixes (as to password recovery or any core functions) have been provided almost immediately - since the main priority was core functionality.

As for the FUD-claims, I've made sure that it is not claimed to be FUD (which is basically false advertising). With a huge enough userbase, maintaining FUD is not viable because the raw stub is bound to be distributed. (Actual software having 10,000+ customers can know exactly why this happens) heavily, which ensure detections almost immediately.

As for a website blocker, it is also within Sentinel. I assume the WebcamLogger was initially in AutoLOG till others started to code it for themselves as well.

Personally, the client-base looked at in mind with Sentinel is mostly off-site, as not everyone uses managed languages (like .NET) for their programs. Sentinel is native and thus has no dependencies.

Its just a comparison part in the thread design, that too from 2015 (when Agent Tesla didn't even release his keylogger).

Back then, I think I remember AutoLOG/Sentinel was the only long-standing keylogger out there, unlike others which used to appear and disappear every few weeks.

Actually your opinion kind of interesting although it has been the first response I've ever seen

regarding it, I've seen people call out other competitors without having their stuff figured out, and definitely I'm sure and can speak for it that Sentinel is not calling Tesla out. Tesla's one of the only competitors which actually deliver on what they say (apart from FUD rates, but I guess everyone knows its hard to maintain it with a large userbase) albeit he still does try his best to reFUD it whenever he can.

fastlane20 - July 15, 2018, 6:31 am

sentinel is dead , no update no response from the customer care, the customer care comes once in 3 months and spend 3 mins and go for another 3 months, buying sentinel is wasting of resources time and data, i prefer agent tesla and orion keyloggers

Demian, you re killing sentinel, i have lifetime license i never use it for 5 months, your support is once in 3 months and u spend 3 mins, you will be attending to someone and u will log out without notice, no update and no support. money i spent in sentinel was wasted resources and time

DamienVC - July 15, 2018, 7:26 am

Checked from the support, 3 unread messages as of now. That's it. Your message is not one of them. Do not contact Ray on skype as he isn't there, use my Skype, as its operated by support rn.

Also, I'm not sure why you would be insistent on a setup when there are video tutorials for basically everything? Around 50% of the clients don't even ask for setups nowadays.

EDIT: <http://prntscr.com/k71ei7> Heh

Yeah I wasn't trying to trash Sentinel or Tesla I was just telling OP what I experienced with lots of testing and configurations with both. Yeah again hundreds of clients use the same stub, which means that if a couple of people get their stub scanned by an av or virustotal, then it gets detected much more quickly. You're better off getting a stand alone crypter and being creative with the assembly and icon.

DamienVC - July 16, 2018, 6:08 am

(Jul 15, 2018 11:00 AM)Bob_Ross Wrote: [\[CITE\]](#) Yeah I wasn't trying to trash Sentinel or Tesla I was just telling OP what I experienced with lots of testing and configurations with both. Exactly. I assume its a similar situation with keyloggers that are popular off-site, at the point where you are working on getting it FUD (without making an in-built crypter, mind you, in the case crypter is automatically applied to the stub, and it is still detected, which is a possibility) - but all of those are done on the private renditions/versions of Sentinel (which are not sold right now, which is once again why we're highlighting it's just not a quick cash grab). Private versions are sold for \$250 each, where the stub is completely private and the owner of that version dictates whether their stub will remain FUD or not. Some customers have used the same private edition for over a year by limiting the distribution of their respective stub. Removing detections is mostly the job of the external crypter you employ to use, not the base keylogger/RAT/botnet you're using.

By the way, in case you've been a previous customer of AutoLOG (lifetime), you were/are still eligible for a full Sentinel lifetime license. That's how we didn't force anyone to repurchase, unlike several other keyloggers on HF (Not going to call any of them out). It was re-released under popular demand (used to get 500+ emails/messages/add requests all wanting to purchase AutoLog) - so I eventually conceded all the files and my rights to my partner, Raymond Reddington. What he's made sure is that the keylogger is 100% functional, as well as hiring a support agent to make sure people are responded to (majority of them adding my skype due to cached pages of old sales threads, and the fact that I ran it during 2015-17.) Now, since sales are not only on HF, and a majority of them occur offsite, there is a lot of load for the support to handle (some people don't exactly contact the right handles), but there's been video tutorials for everything - activation, SMTP setups, exploit creation, etc. A lot of the off-site members are able to set it up themselves (similar to clients of Ardamax, although I can assure we have better support than them).

The changelogs mostly include updating password recovery for the new FireFox/Outlook/Thunderbird clients, which haven't been publicized due to the fact that they're revealed in posts (similar to Tesla) either by the support agent himself or me, if I get the post data from the agent.

blackgold3 - August 16, 2018, 7:33 pm

DamienVC i message you on skype that i want to renew my license and till now you have not responded... can you check your skype please...!

hard2hold2 - August 21, 2018, 6:08 pm

I would honestly recommend sentinel. thats the one i use

morrigan - August 22, 2018, 12:33 pm

Sentinel doesn't recover passwords.. Always having same issue with password recovery.

Did all the settings correctly, tested on 2 PC's with passwords stored on browser cookies, never

recovered any. Too bad.

DamienVC - August 23, 2018, 11:51 am

(Aug 22, 2018 12:33 PM)morrigan Wrote: [\[CITE\]](#) Sentinel doesn't recover passwords.. Always having same issue with password recovery.

Did all the settings correctly, tested on 2 PC's with passwords stored on browser cookies, never recovered any. Too bad.

Just recovered 262 passwords as a test in a matter of seconds, includes the following:

- WinSCP
- FileZilla
- Firefox (including proxy user:pw)
- Chrome (including "never save" URLs)
- Pidgin
- Skype
- Microsoft acc credentials, including MS Office 2016 login and OneDrive logins
- Internet explorer / Edge

Hell, it even recovered saved WLAN passwords & RDP logins.

morrigan - August 24, 2018, 2:56 am

Bro stop lying. I'm not the only one complaining about this.

Even wrote you on skype about it and you asked what i'm using as report box, i told you webmail, you said i should use zoho or vivaldi, which i still used, same empty passwords, brings only screenshots and pc details.

You can't tell me problem is from my 2 PC's, even my friend is having same empty password issue.

Work on your password recovery and stop the lies.

DamienVC - August 24, 2018, 7:35 am

You are probably using an outdated version which you never contacted me on Skype to fix. Auto-update is disabled for the security of everyone, you'd have to download it manually.

If not, you are still facing the same issue of network propagation & speeds. You cannot expect support agents to get on TeamViewer and spend 1hr+ due to slow networks while it only takes them 5mins to do the setup for another customer. You're not the only one waiting.

You better not sling accusations when it isn't the program's fault

<https://imgur.com/n7Gv4vV>

morrigan - August 24, 2018, 4:53 pm

"You are probably using an outdated version which you never contacted me on Skype to fix" ...Are you kidding me?

I contacted you on skype about this recovery problem why didn't you make mention of outdated version?

All you said was that it should be from my webmail, i still used the ones you recommended, still same empty report for passwords. I kept complaining you asked for Ultra viewer which i provided and you never came to fix anything, clearly cos you know there's no solution to it at the moment.

Besides I purchased this early this month, which is recent, so how did you deliver an outdated version to me?

You are also blaming network and internet speed, why must it be only your tool that requires blazing fast internet before recovering passwords? Since you claim it's network, why does it bring screenshots and pc info, then the password.txt is blank with 0kb (when there are passwords stored on my browsers for my 2 test PCs)

I have other .Net loggers, they all work fine even with network slower than a turtle.

I had to purchase your logger cos i needed a native logger, not knowing that you guys just abandoned this with no update. Saddening!

Eagle eye nike - August 26, 2018, 4:32 am

wow!! Thought Autolog must have corrected the bugs by now.. Seems i will reconsider purchasing any.

DamienVC - August 26, 2018, 9:53 am

People who've used it in the past never had issues with PWs. If you purchased recently then you have the latest version sure.

I did not warrant or recommend any webmail till date apart from Shinjiru which shut down recently.

The network issue problem is not with the PW, but its dispatching support agents on a slow network which neither they like doing, and in general it just takes longer for them to show passwords as functional on the local PC

If you're sending it unencrypted then it isnt the KL's fault either, as it will get runtime detected 100%.

DAVINCI MONTANA - August 26, 2018, 11:27 am

If you're sending it unencrypted then it isn't the KL's fault either, as it will get runtime detected 100%. Unfortunately I did have the same problem when I purchase Sentinel some months ago.

Password.txt was empty. You checked on my PC teamviewer and found out that it was grabbing the passwords but not exporting them.

Although that was some months ago. I expect it should be fixed in your later updates.

Should also add this, the password recovery was great as it grabbed from also every web browsers and email clients, just needed to fix the bugs with exporting the recovered passwords.

donat2013 - August 28, 2018, 4:11 am

As for me, i have used Sentinel many months ago and the problem is that it's recovered password is always empty, i don't know the reason for that. But when i test the file in my computer it recovers fine, then i am surprised why more than 20 clients PC that runs the file always recover empty password. This was a big issue to me then i purchased Agent Tesla.

Currently i am using Agent Tesla but my only problem with AT is with FoxMail recovery. When FoxMail is closed it will recover the passwords but if password is more than 10 Characters then it won't recover foxmail. But when FoxMail is opened, then it won't recover anything from FoxMail, I guess when it's open Agent Tesla couldn't detect FoxMail. Another problem is also with the same FoxMail client.

Other than this, then Agent Tesla is the best, I sincerely hope he will read this and try to fix this minor problem.

Thinking which one to choose? Go for A. Tesla!

DamienVC - September 3, 2018, 12:02 am

Hi everyone.

I'm just interested to purchase keylogger and i try to make some survey and i find out where you Guys discussing about Sentinel keylogger and Agent Tesla keylogger. i try to check Sentinel keylogger customer and see their comment, i find out it's was nice 2yrs ago but as from this year things change but i never see anyone complained about Agent Tesla keylogger, so i want a little help from you guys.

can someone tell me the best keylooger i need to purchase, I'm ready to pay any amount of money just to get the best Keylooger. i used Predator Logger last few years before the owner of the keylogger stop selling it. so since then i haven't been able to find the best one like Predator Logger until now i came across this discussion.

i hope someone can give me the info about the best keylogger , I'm ready to pay any price to get the best keylooger.

Thanks

(Jun 9, 2018 02:55 AM)kinsella Wrote: [\[CITE\]](#) I discovered that Sentinel and Agent Tesla are the most popular keyloggers on HackForums

Which one of them would be a worthy investment?

And which one of them is compatible with most well known crypters

Thanks

but i bought it i cant even download it

Both have the same options rllly. Its purely based on opinions.

cooltiti105 - January 11, 2019, 12:12 pm

Both aint the same Sentinel is a native logger while Agent Tesla is .net so i think there are some big differences too

Hi

I have read much about RAT differences, up and downside.

I think Tesla is OK,

Can you sincerely help me where I can buy RAT, maybe go for another choice of RAT?

Can you also drop me your skype name or what to reach you?

Help me with a reliable site to shop for RAT
