Thread: [Shell Via WordPress Image Uploading?](#)

focuss - June 13, 2018, 6:15 pm

Is it possible to upload a shell via WordPress image upload?

I know wordpress re-creates the image which will remove any malicious code but was wondering if there was any other way?

Of course not... Unless you find a new method.

ernestmiller - June 14, 2018, 8:25 am

Unless they are running a version of Wordpress that has that known vulnerability then a big fat nope

I actually poked around playing with bad input a few months back. I was contracted for some web dev work and they INSISTED on using WP. Was kinda on a spiteful quest to show how garbage it is. So I'm interested in any additional answers to this topic, as I was unable to find any submission methods that dont in some way validate or sanitize input.

As long as the WordPress is up to date you can't upload a shell via the uploads folder, try using a tool such as wpscan and you might be able to find outdated add-ons or ways to brute Force the login with say open xmlrpc
