Thread: [NETSeal - Security Licensing system for .NET files](#)

Aristocles - June 15, 2018, 2:27 am

Welcome to NetSeal !

Hi! This project is a revamp of NetSeal, a well-known licensing system developed by Aeonhack, a former HF member. It is made to cover license-management on your software, providing extra security features. If you want to learn about NetSeal, you can read the thread. If you want to play with NetSeal, you need to wait for Beta release (very soon), and you can look at the public examples on [github](#). If you want to contact us, please do at support [at] netseal [dot] xyz.

Why ?! Where ?! When ?!

This project started because I did not find what I think is a decent security licensing solution system for little devs like us. This project started in June 2018 and will be released in June 2018. Keep an eye on our up-to-date [project page](#) !

## Features

Our features are meant to be as simple as possible to use and as safe as possible for your application. We implemented some Native Protection on the new NetSeal native Core, Anti debugging techniques, Remote Code Execution on specific method of your assembly, Unlimited Server Variables for you to be able to maximize application dependency over the server, and so much more ... With NetSeal, you have full control over your program.

Features in blue are new features

Other features are just old NetSeal features

[Header over the project's flow](#) to get a visual representation of what is done, what is in progress and what is to do.

As of today, current features are :

Project's core is now native (C++)

New desktop dashboard with automatic installer included

Manage multiple program

Manage all your licences

Manage all your customers

Manage all your server side variables

Automatically install NetSeal to your compiled (.EXE) file

Unlimited server side variables

Online status (shows who is online)

License banning

Detailed logs (limited computer informations, connection count, and IP logs)

License code details (code, created and claim dates, owner, payment tracking)

Timed or unlimited client session

Tracking information (such as PayPal email or transaction ID)

Automatic updates

Machine locking

- Compressed updates (less stress on host and faster for users)
- Exception logging (find errors in your program)
- Choose to receive exceptions directly to your mail[/color]
- Native anti debugging and anti reverse engineering techniques to prevent http sniffing as much as possible
- Alert mode to remove your application file on every customer's computer
- Native loader reserved for first customer's run to scan computer for cracking tools and potential threats
- In-built anti tampering techniques making your file dependent from NetSeal as much as possible
- Advanced HWID system to bind files to your customer's computer
- Remote code execution of specific method from your file in the cloud
- Public PropertiesUsername
- SessionID
- HWID
- IP Address
- Licence Code
- Licence remaining time
- Server-sided update loader to keep your files always up to date automatically
- NetSeal core files automatic update
- Semi-Automatic Selly.gg integration with our web API
- Secure connection (one-way encryption)
- Reoccurring server check-in (user stays authenticated and has the latest data)
- Hosted system so you don't have to find yourself a host
- Frequent database backups
- Much more to come...

## Code Implementation

Even if the new NetSeal includes an Automatic Installer you are free to hard-code the implementation. It is as simple as possible, really : we kept the same class-only structure the old netseal had. Note that if you use a VB.NET Project you will need to add a reference to System.Management and System.Security. If you don't know how to do that, head over [our Wiki page](#) to read tutorials !

Before starting to implement the system, you must download the adequate class (.CS / .VB) (soon available) and add it to your project.

## C# Implementation

To get a program ID please first create a program on Netseal website..

Code //program.cs

```
using System;
using System.Windows.Forms;

namespace YourProgram
{
    static class Program
    {
        // Declare a public static NetSeal instance
        public static NetSeal ns;

        /// <summary>
        /// The main entry point for the application.
        /// </summary>
```

```

[STAThread]
static void Main(string[] args)
{
    Application.EnableVisualStyles();
    Application.SetCompatibleTextRenderingDefault(false);

    // Initialize your NetSeal instance with your program ID
    ns = new NetSeal("put your program Id here");

    Application.Run(new Form1());
}
}
}

```

#### VB.NET Implementation

To get a program ID please first create a program on Netseal website..

#### Code Public Class Form1

```

Public ns As NetSeal

Public sub New()

    ns = New NetSeal("put your program Id here")
    ' This call is required by the designer.
    InitializeComponent()

    ' Add any initialization after the InitializeComponent() call.

End Sub
End Class
Screenshots

```

If you have any suggestion, please, let me know it ?

**tweety** - June 15, 2018, 2:45 am

first of all aeonhack was charged for netseal, he literally got additional sentencing for it. you're not very smart to use the same name and forum to sell this on are you?

second, why are you using the same name as aeonhacks netseal if you're not using the same code base? just sounds like you want to make this popular from name alone.

**Aristocles** - June 15, 2018, 2:58 am

(Jun 15, 2018 02:45 AM)Tweety. Wrote: [\[CITE\]](#) first of all aeonhack was charged for netseal, he literally got additional sentencing for it. you're not very smart to use the same name and forum to sell this on are you?

Hello sir ?

I know Aeonhack has been charged for his illegal activities and the former netseal project.

Since Aeon's netseal is dead, the place is free again. It's a marketing move.

Malwares are not allowed on NETSeal. So your fears can be calmed down.

**Darkwin** - June 15, 2018, 3:07 am

Nothing wrong with OP wanting to revamp it, It isn't like he can call/message Aeonhack and ask for permission.

Besides that nothing illegal about a licensing program.

**tweety** - June 15, 2018, 4:38 am

(Jun 15, 2018 02:58 AM)XenocodeRCE Wrote: [\[CITE\]](#) Hello sir ?

the biggest portion of his charge was netseal, if you followed his case and read the legal papers.

I think using his product name because of the popularity is a dick move, pretty sure most devs would agree.

**Armada** - June 15, 2018, 4:49 am

(Jun 15, 2018 02:58 AM)XenocodeRCE Wrote: [\[CITE\]](#) Since Aeon's netseal is dead, the place is free again. It's a marketing move.

It does not work that way.

Whether the project is in development or not, he has legal ownership to the intellectual name.

He could easily sue you and win.

**Darkwin** - June 15, 2018, 6:01 am

(Jun 15, 2018 04:38 AM)Tweety. Wrote: [\[CITE\]](#) the biggest portion of his charge was netseal, if you followed his case and read the legal papers.

Fine, Rename it to NetSell,NetSeel etc. Fin.

I'm sure the developer has bigger fish to fry than to sue over an HF product.

**tweety** - June 15, 2018, 7:09 am

(Jun 15, 2018 06:01 AM)Darkwin Wrote: [\[CITE\]](#) Fine, Rename it to NetSell,NetSeel etc. Fin.

nah, it's just sad when people use other people's reputation and product names to gain popularity when they can't build it up themselves. I own an extremely large site, bigger than hf and my competitors do what op did, they aren't even close.

build your own name, don't leach off someone else's.

**Washi** - June 15, 2018, 8:22 am

Have to agree with Tweety and Armada here. Can't say I am happy about the capitalisation of other people's success, if you want to call it that. Seems like a very risky move to make, let alone the fact that it might still be the intellectual property of Aeonhack, regardless of the fact that he is not around anymore.

Also, can you elaborate a little more about the following features? Native Core Project - What is the benefit of this? Are we referring to the application that is running on the server? If so, then how is this a feature? Or do we need to include a native library in our application?

Tracking information (such as PayPal email or transaction ID) - I assume you have a solid privacy policy for this?

Machine locking - I have no idea what to expect here?

Native loader reserved for first customer's run to scan computer for cracking tools and potential threats - Again, the privacy policy?

Secure connection (one-way encryption) - What kind of encryption scheme do you use? I can imagine a customer of your services wants to ensure that their customers' data won't be out in the open.

Also, why does the VB.NET project version also require System.Management and System.Security? Your example code for C# looks quite different in behaviour from the VB one. Assuming that VB.NET coders use common practices, why provide sample code that initializes it in Form1? Not every application is a WinForms app, especially with the rise of WPF, let alone the fact that the program might not start with a form in the first place...

I am a little confused here ? .

**Fafaffy** - June 15, 2018, 9:45 am

Yeah I'm 100% against using NetSEAL's name when you have no affiliation to the original's product. I ran my own security software back in the day (albeit not nearly as good as net seal's) but I did so under my own name, not stealing someone else's.

It's just such a disservice and disgrace to Aeonhack.

**Aristocles** - June 15, 2018, 10:45 am

I am a little confused here ? .

Hello sir ?

Class file download the native Core pipeline file, a dll that handles all the login/register/get variable functions. No need to include anything, it's all P/Invoke and ready to use.

Yes, we do not have a liquid privacy policy. It is rock-solid.

Machine Locking is HWID lock.

Again not liquid at all. No sensitive data is sent to the server during this process, it is only a local check for dnspy, olly, x64dbg, wireshark and so on.

RSA is implemented, and HWID + current user Session ID are part of the decryption algorithms.

VB.NET Project needs System.Management because the HWID class is using ManagementObject. I removed the need of System.Security. I provided code that is both tiny and simple to understand. You are free to initialize the auth wherever you want, or you can use the automatic installer to install it to entry point. We do support WPF app, it was only biased exemples, I can provide F# and raw MSIL implementation for fun too.

Aren't we all confused ? ?

Hello sir ?

Trademark search system tell me that dozen trademarked projects have been with the name "netseal", capitalized or not. I am not the only one, and Aeonhack is surely not the first, tho I may be wrong on that last point.

Aeonhack trademark record ended up on April 23, 2005 according to [this link](#)

I'm not stealing, the name has been thought to be used for years now (literally, since 2014) to follow my projects name scheme : NETGuard, NETSeal, etc.

Have a nice day ?

**tweety** - June 15, 2018, 11:23 am

you seem pretty delusional. you named it netseal for the popularity and don't need to build it yourself, just hanging someone else's products popularity. you can say what you want but it'd clear what your intentions are and nobody likes a leach.

**Aristocles** - June 15, 2018, 11:37 am

your marketing move is also considered a dick move, especially to devs/competitors. I'm sorry if you can't read that.

anywho, once the malware starts seeping in (yes, it will regardless of what you say, aeon tried his hardest to make sure netseal wasn't being used for malicious stuff, I'm pretty sure you won't be as sincere, even if you are, look where he ended up), you'll end up in jail too.

**Aristocles** - June 15, 2018, 11:50 am

-

As far as former netseal and malware are concerned, if Aeonhack really wanted to prevent them he could have done it.

My deal is to ask developpers to scan their file on VT, and provide the scan link, then I compare file's SHA-256.

I do not think you fully grasped what I was asking.

The core functionality is downloaded to the client computer, alright. Again, how is it being a native binary a feature? Yes .NET is easy to disassemble we all know, but it's not that hard to reverse engineer a native library that is making a few API calls to the server either. if you rely on this library to be a native PE, then I really question your security. Also what is the point of providing a class file for multiple languages? Seems like a waste of time to give implementations of the same code in multiple languages when you can just put it in a dll instead. You are dealing with dlls anyway, so I do not see how portability would be an argument (because I think that is why you do it). Or am I wrong?

I mean sure you have a privacy policy that is rock solid, but I would like to see it before I'd buy anything to be honest. I am pretty sure lots of buyers here would also want to see it (or at least I hope they would).

Then what is the difference between "Machine Locking" and "Advanced HWID system to bind files to your customer's computer"?

RSA is implemented everywhere. But RSA is getting a buzzword, and it can also be used incorrectly. Just saying RSA does not tell me much. In my opinion, security algorithms about transport should be as transparent as possible before I trust the application to send my data.

My question about the dependencies was more about how does it differ from the C# version? Shouldn't it be the same dependency list as it is all CIL? The automatic installer is a nice feature.

And about the name, regardless of whether the patent was expired or not, it is still not the nicest way of profiting from others' success. It's like calling my next song "Never say never" because Justin Bieber is popular.

Do not get me wrong, I do not mean to bash on the product or anything. But since this is a product related to security, it can be done incorrectly so easily.

**Aristocles** - June 15, 2018, 12:23 pm

Hello again sir ?

Native binary is seen as a feature to the extent that it keep 90% of crackers that are active on other internet forums (not tuts4you nor rtn but rather gaming-specific forums) at bay. I discussed with VMP too and they offered me a deal (expensive, will definitely consider in the future) so native was something to look into. Also native dll file because I do clr hook using the profiling API, and I might also do a native VM for dotnet files. The thing is that it is not yet another standard Licensing system because developers application security is a priority, by that i mean that the native dll does not only "do a few api calls" but contains core features and protection system too.

I'll definitely work on that Privacy Policy, Terms of Services and so on. I see what you mean here, but trust me all legal part of the privacy will be detailed and users will need to accept it before using this service.

Machine lock is : block every licences linked to that machine. Advanced HWID system uses HWID as a decryption key somewhere somehow prevent files from running on other's computer.

I do agree, I see RSA everywhere now. I use EasyRSA. Now its not transparent anymore but I don't want to hide anything to my users.

C# version also need the System.Management reference. My VisualStudio add dependencies automatically (?) for C# project but not VB project. I don't code VB that much. But yes at the end i'm targetting MSIL. Automatic Installer is also where you will be able to select method for remote code execution and so on. It is a way for me to force developers to scan their files on VT, if they don't do it they can't deploy the application ; there are other VT check than the Automatic Installer one don't worry :)

About the name, I knew some people would not like it. Too bad, the thing is that I can change it to NETSELL or anything like that at every moment. Projects'name is stored in a mysql DB and labels got their value from that mysql query. But I don't really want to do that ; not only that but I'm convinced that if i can bring this project to a solid phase Aeonhack would not mind at all. I even states this is a revamp of a former project.

Thank you so much for your replies and you time. They are really valuable and quality replies, helping me to focus on Privacy Policy for the legal side of that project, and asking about actual security features is something I like to do. again, thank you ?

Have a nice day sir ?

**Suspect.** - June 15, 2018, 4:09 pm

Despite the negative comments on this thread, the Concept of NetSeal was great and useful. Nice to see it making a Revival. Hopefully the Security side of it is even stronger than the prior versions.  
Good luck with this.

I think eventually it probably would be best to change the name though.

**Kobo** - June 15, 2018, 4:12 pm

Let me report this to krebs real quick so can see you locked up too

**Darkwin** - June 15, 2018, 4:37 pm

(Jun 15, 2018 09:45 AM)Fafaffy Wrote: [\[CITE\]](#) It's just such a disservice and disgrace to Aeonhack. Yeah okay, Aeonhack was disgraceful to us; He got greedy and with no heads up would raise the prices on the 'slots'.

I get that it was his application and he was free to do as he pleased but after having over 2k customers i had to basically shut down the project as there wasn't exactly a better alternatives. Also it got so bad where towards the end he wouldn't even accept Paypal any longer, Not that i blame him (his prog, his rules) but he didn't seem to care about other vendors on his application, Why should i care for the well-being of his brand?

That being said OP you may think now that it is a great 'marketing move' but its really in poor taste and you've shown you aren't capable of releasing an application on your own without riding the coat-tails/hijacking another brands identity. A real marketing move would've been to purchase nimoru.com and forward it to your apps website, Besides you didn't exactly NEED to hijack his brand, i'm sure you would've done fine on your own as there isn't much competition for licensing systems.

**gringo** - June 15, 2018, 5:02 pm

Malwares are not allowed on NETSeal. So your fears can be calmed down.

The original didn't allow malware either and look where Aeonhack ended up.

This is probably the stupidest marketing move I've seen on HF to date. This is like Toys R Us going out of business and I open up a toy store called Toys R Us, don't you think people will think you're retarded? Clearly you need to lay off the weed because your replies are as dense as your lack of creativity. You could have called this "DogShit" and people would have shown a genuine interest in your software but you had to cry for attention by naming it Netseal.

**UpTheCrust** - June 15, 2018, 5:19 pm

This reminds me of the guy trying to market "LinkLuminosity"

This is a bad idea

**Aristocles** - June 15, 2018, 5:44 pm

(Jun 15, 2018 04:09 PM)Suspect. Wrote: [\[CITE\]](#) Despite the negative comments on this thread, the Concept of NetSeal was great and useful.

Our goal is to be cheaper than competitors and offer a better service in the same time. We will be open to project migration (X -> Netseal) for a very cheap price. We will use both BTC and PayPal to allow payment from developers. My main concern is and has always be user experience.

However, taking the name of an older project that is now gone is definitely not something embarrassing for me, on the contrary. I am creative when I code for instance, when I seek for ideas, when i design the admin dashboard. I own other projects with their own identity.

**Kobo** - June 15, 2018, 6:02 pm

you have no goal

if you did you wouldnt have to steal another hf users product name

**EagleEye** - June 16, 2018, 3:19 am

good luck with your NETSEAL thing isn't this project was the older one you stopped working on it?

**Aristocles** - June 16, 2018, 7:56 am

What kind of "Malwares" are not allowed? are crypters or similar products allowed?

Hello sir ?

To use our service you need to scan your file on VT first, and provide a VT scan link on the admin dashboard.

If MD5 matches, then your applications is free to use our service. So you cannot licence a binary that is a malware.

At current stage you can licence builders and trainers etc so files that do not contains malicious code.

(Jun 16, 2018 03:19 AM)961Group Wrote: [\[CITE\]](#) good luck with your NETSEAL thing isn't this project was the older one you stopped working on it?  
Hello 961 ?

Thank you for your kind words, I stopped working on softguard because the domain name was too expensive for me now.  
However the UI and the backend code are the same.

(Jun 15, 2018 04:12 PM)Kobo Wrote: [\[CITE\]](#) Let me report this to krebs real quick so can see you locked up too  
Holy shit that made me laugh, I needed that right now.

Regardless, OP, you simply can not assume another company or products name.

Its simply illegal.  
You talk about disallowing malware, but your breaking the law right off the fucking bat, talk about irony.

**0xBB** - June 16, 2018, 2:20 pm

I agree with TuP and Tweety, you really should change the name while you still can, I am sure you will still get good sales/client base.

**Pronouncer** - June 16, 2018, 3:11 pm

Whatever the case is.

As for OPs "Marketing strategy" to use the same name is also rather bone headed.

The NetSeal name is now associated with criminal arrests, convictions and drama.

Not a bright marketing move IMO.

And honestly an overall stupid idea.

Hello sir ?

I must clarify something beforehand :

Wardow did not helped NetSeal 2 (Debug / Pan ownership) nor NetSeal 1 (Aeonhack ownership). EZLib is not a copy pasta from NetSeal 1 nor 2. They have similarities because they are similar products. The backend is totally different, i got access to both source code (EZLib can confirm that).

Also I do not have Aeon's permission, nor Debug's / Pan's permission, but I don't need it. Let see the market in 5-6 months.

Thanks for the kind words ! I'll make sure to impress anyone here with NETSeal security and hope a lot of program owners will use my service.

My products have always been top tier and will continue to be so.

Have a nice day ?

Hello sir ?

No licensing system is illegal in itself, and no active trademark registration has been found for the name "NetSeal" claimed by Aeonhack.

No malware binary will be able to be licensed or protected by NETSeal, however if you protect the builder and that no malicious code is found by VT, then I can't prevent the usage of my product.

Have a nice day sir ?

**Armada** - June 17, 2018, 1:43 pm

Ahahaha... I am laughing but fearful for you both at the same time. ? ?

Nothing about this is going to end well for you, I can guarantee that much.

I am saying this to you after doing one hell of a lot of legal research on this kinda stuff for my own products.

I strongly suggest you seek some free legal advice or something, you will be told the exact same thing I am telling you.

Oh as for the malware BINARY.

No that does not matter. lol

Aeonhack got in shit for licensing a keylogger builder. not the binary output dumbo.

RETHINK WHAT THE FUCK YOUR DOING ON ALL ENDS.

**EZLib** - June 17, 2018, 1:45 pm

EZLib and NetSeal (V1) do not have any connections at all, NONE!

Yes, it has similarities because we (EZLib) wanted to provide an ease to the headaches of hundreds of developers looking for an easy-to-implement soln. Please do not continue saying we (EZLib and NS V1) have connections because we do not. We do have a developer from NetSeal (LaPanthere), but he does not do development in any case, he is there to support us.

I am just going to say another thing, yes I understand everyone is frustrated that Xeno has used NetSeal as his brand name for his product, but Aeonhack never owned the trademark of "NetSeal". It is not his intellectual property anymore, and it is shutdown. If Aeonhack would've trademarked such brand, then Xeno has a reason to be accused.

You missed my question about what exactly was illegal in him using a project name that was never trademarked / a registered company.

You may comply with your country's law for legal usage so I suppose you must own a company that does remote access to your clients like in a school / business with employees and so on, if so, then yes it's completely legal. I didn't mention that you were doing illegal actions either. I stated that a very very low usage of users use RATs legally on HF.

Another note, anyone could trademark your tool's name and sue you if it is not trademarked / a registered company, it's how the law works.

That is my point.

I truly understand why someone could be frustrated at Xeno for choosing the name of this project, and I'll admit, I agree. But when it comes to legal grounds it's where everything changes and the user believes since a developer called something and then the project is over that no one can use it.

Here is an example to future comments.

Tesla trademarks their car company name. They shutdown, and the trademark expires in a few more years. Once the trademark has expired, BY LAW, another person can come and trademark it and have all rights to the name.

In this case, NetSeal was never trademarked. It is fine for Xeno to use this as his project name, although some may dislike that he is using the name for "attention".

(Jun 17, 2018 06:24 PM)Armada Wrote: [\[CITE\]](#) ...

(Jun 17, 2018 06:48 PM)Armada Wrote: [\[CITE\]](#) ...

Oh why thank you for not answering almost all questions I asked you.

Here is some advice,

You shouldn't talk about legal terms unless you know what you are talking about and have valid documents of such thing being trademarked. If you truly are this hurt, why don't you trademark this name and then you could sue Xeno.

I understand it's hard for an illegal RAT creator to be given an "L" (2018 slang am I right?).

Unanswered questions (if you ever want to continue your argument)

- what is illegal of an user using an untrademarked name?
- isn't it illegal to not notify the user their computer can be controlled remotely?

**EZLib** - June 17, 2018, 7:05 pm

(Jun 17, 2018 07:01 PM)Armada Wrote: [\[CITE\]](#) ...

You have yet ignored my questions again, but alright I see you just want the last word so after this reply with another "professional" comment.

Professionalism is the least thing you have in your character.

Reply after this, it's OBVIOUS you want the last word. You are just showing anyone reading this that you couldn't finish an argument you started.

Have a good day sir, hope your illegal RAT is doing fine.

Yeah, that was totally NetSeal, was it ? Or maybe his illegal RAT ? Like yours ? ;)  
quick edit : if you actually read the 14-pages-long court official paper of Aeon's trial, you will see that you have more chance to be the next one, Armada.

**Kobo** - June 18, 2018, 1:34 am

(Jun 18, 2018 01:30 AM)M0HX Wrote: [\[CITE\]](#) Why is it so hard for you just to rename the product and be safe even if you are sure nothing is illegal?

Armada is right about associating same product name that had a record in the past.. not a good idea.

There are plenty of other names you can use and as most people said in this thread.. IT WON'T AFFECT YOUR BUSINESS to change the name!

As for the malware part, I don't think just scanning a file on VT will do the job. because there are many ways to bypass the detection and still have your licensing system on it.

Anyways.. think about what we recommend you todo, which is so simple.  
cause he a lazy fuck.

anyone with a brain would not steals someones brand name. as op has no permission to use it ALL. he is just asking for lawsuits flying left and right then we will see him crying in a new thread asking for funds for his trial

right from krebs

"The court was swayed by evidence that yes, Mr. Huddleston could be held criminally responsible for those actions."

**EZLib** - June 18, 2018, 2:35 am

(Jun 17, 2018 07:30 PM)Armada Wrote: [\[CITE\]](#) ...

I must say, if you have 24/7 support for your illegal RAT then you got it bc you are still arguing even after I slept. Although you said "K. One more reply" and still continued.

Also, you should've given me my negative reputation from this thread so everyone could see why you have given me it. Thank you though I appreciate it. Same goes for you Tweety.

Back to the legal mess, unless you find legal documents that have NetSeal trademarked then no one is going to jail. We're talking about laws here, not morals.

By morals, it's wrong to do.

By law, it's fine to do.

If you would've never brought the legal mess then you wouldn't of heard me nonstop beating you from every corner you come from. But yes, morally this is wrong.

"I don't give a flying fuck yo" - sir/ma'am you obviously do. You are truly hurt that Xeno is using this as his project's name that was never trademarked by law, but morally yes.

Your problem is that you're combining morals and laws. The law does not mix well with morals, like water and oil. Stopping doing such thing and you will not keep getting bashed.

**Pronouncer** - June 18, 2018, 2:55 am

Ngl IDC about the legality of this. Xeno is a great dev and security expert when it comes to cracking, and I'm sure it goes further than that, so it's nice to see this new version of Netseal come out, as far as I'm aware Netseal wasn't a trademark. But either way I'll be using this because I know Xeno has great experience in this field.

**EZLib** - June 18, 2018, 4:12 am

(Jun 18, 2018 02:55 AM)Pronouncer Wrote: [\[CITE\]](#) ...

Hey sir/ma'am, watch out before you get a negative reputation from users like Armada for taking Xeno's side.

I never took a side nor do I need to. I'm just stating law facts.

(Jun 18, 2018 01:34 AM)Kobo Wrote: [\[CITE\]](#) ...

Please read the whole thread before commenting. It would help because your comment is absolutely wrong.

NetSeal was NEVER trademarked. IT IS LEGAL for Xeno to do such thing. MORALLY it is wrong.

STOP mixing MORALS and LAWS together. MORALS will ALWAYS follow the LAW no matter what.

EDIT: I see your reputation from Tweety. He/she gave it from this post, why didn't he/she do the same to me? Yeah that's right, because he/she is mixing morals and laws together and that doesn't work in society.

TWEETY: Your reputation is absurd because I comply with the [Help Docs](#), but alright thank you again!!

**Aristocles** - June 18, 2018, 5:31 am

(Jun 18, 2018 01:30 AM)M0HX Wrote: [\[CITE\]](#) Why is it so hard for you just to rename the product and be safe even if you are sure nothing is illegal?

Armada is right about associating same product name that had a record in the past.. not a good idea.

There are plenty of other names you can use and as most people said in this thread.. IT WON'T AFFECT YOUR BUSINESS to change the name!

As for the malware part, I don't think just scanning a file on VT will do the job. because there are many ways to bypass the detection and still have your licensing system on it. (false positives as well)

Anyways.. think about what we recommend you todo, which is so simple.

Hello sir ?

Why is it so hard for people to understand that I don't want to rename the service ? Especially since I'm doing nothing illegal ? Why do people claim false things about law when they clearly haven't read Aeon's court recap ? Why do people speak to me about laws when they clearly are still in high-school ?

As for the malware, there is no way you can bypass VT detection engine. I'm comparing MD5s. If a false positive is a factual thing then I'm free to assist my users and ready to hear what they have to say to defend themselves. But obviously 50/67 is not a false positive. Nobody will be able to bypass my anti malware system.

Have a nice day sir ?

(Jun 18, 2018 04:12 AM)EZLib Wrote: [\[CITE\]](#) Hey sir/ma'am, watch out before you get a negative reputation from users like Armada for taking Xeno's side.

I never took a side nor do I need to. I'm just stating law facts.

Please read the whole thread before commenting. It would help because your comment is absolutely wrong.

NetSeal was NEVER trademarked. IT IS LEGAL for Xeno to do such thing. MORALLY it is wrong.

STOP mixing MORALS and LAWS together. MORALS will ALWAYS follow the LAW no matter what.

EDIT: I see your reputation from Tweety. He/she gave it from this post, why didn't he/she do the same to me? Yeah that's right, because he/she is mixing morals and laws together and that doesn't work in society.

TWEETY: Your reputation is absurd because I comply with the [Help Docs](#), but alright thank you again!!Armada isn't a cuck like that. He's pretty chill when you talk to him  
This just got blown out of proportion

**Armada** - June 18, 2018, 6:09 am

(Jun 17, 2018 08:41 PM)XenocodeRCE Wrote: [\[CITE\]](#) « on charges of Aiding and Abetting Computer Intrusions or Attempted Intrusions. »

Yeah, that was totally NetSeal, was it ? Or maybe his illegal RAT ? Like yours ? ;)  
quick edit : if you actually read the 14-pages-long court official paper of Aeon's trial, you will see that you have more chance to be the next one, Armada.

(Jun 18, 2018 02:35 AM)EZLib Wrote: [\[CITE\]](#) I must say, if you have 24/7 support for your illegal RAT then you got it bc you are still arguing even after I slept. Although you said "K. One more reply" and still continued.

Also, you should've given me my negative reputation from this thread so everyone could see why you have given me it. Thank you though I appreciate it. Same goes for you Tweety.

Back to the legal mess, unless you find legal documents that have NetSeal trademarked then no one is going to jail. We're talking about laws here, not morals.

By morals, it's wrong to do.  
By law, it's fine to do.

If you would've never brought the legal mess then you wouldn't of heard me nonstop beating you from every corner you come from. But yes, morally this is wrong.

"I don't give a flying fuck yo" - sir/ma'am you obviously do. You are truly hurt that Xeno is using this as his project's name that was never trademarked by law, but morally yes.

Your problem is that you're combining morals and laws. The law does not mix well with morals, like water and oil. Stopping doing such thing and you will not keep getting bashed.

Look, I deal with my legalities for me LEGAL software.

You boys deal with yours.

I am simply speaking the honest truth and saying it because its going to be a shame to see yet another member end up in cuffs and jail for a project they developed and a stupid mistake like stealing someone elses product name. It honestly really is a real dumb assed reason to get yourself in to trouble.

Its OPs decision, but thinking hes so mart by reading the court affidavit for Aeonhack and thinking he is in the clear is beyond stupid.

I've spent thousands of dollars on legal costs for Orcus for the reason I need to ensure I am compliant with all my laws. Talking to me like I am some noob in High school is just stupid, especially because I am trying to give you some helpful advice.

Full version:

Armada Wrote:-snip-

I'm not a lawyer so don't quote me on this but I'm pretty sure that considering the fact that NetSeal, as a brand name, was never trademarked by Aeonhack then there is no law preventing anyone from reusing the name regardless of similarities. I think I see where you're coming from in the sense that this will also be a licensing system but there are no IP claims that could be made by Aeonhack -he didn't invent the concept of a licensing system- and since the new system is using none of the original code, there are also no copyright claims that could be made. This is also all under the assumption that the OP is located within the US as if not, let alone NetSeal, I've seen images of 'Microsoft PC repair' stores online and frequent use of big brand names while in foreign countries where law enforcement either doesn't really care enough about copyright or aren't legally obliged to do anything. That said, it is morally wrong to use the NetSeal brand without consent from Aeonhack, however, this may only be a problem for the older members of the forum. Also IIRC, NetSeal was either bought or at the very least run by another user on the system after Aeonhack was arrested. If this is the case then there would be even less legal grounds for Aeonhack to sue.

As for the legality of running a licensing system, there isn't anything illegal about providing such as service in and of itself. The problem is would be what the OP considers to be 'acceptable usage' of their service. Basically if they want to be safe, they can't openly or at the very least knowingly provide their service the developers of malicious software while 'gray-area' software should be dealt with on a case-by-case basis. IIRC correctly, the case that prosecutors made with Aeonhack is that NetSeal was actually enabling the developers of malicious software to distribute their software as well as being an integral part of malicious software itself. I can't remember if it was actually cited by the prosecution or just by an article but the product that supposedly proved this was a keylogger (which I forget the name of) that within the sales thread, a 'thank you' was made to Aeonhack for making the software possible through the use of NetSeal.

As for EZLib's claims about the legality of your product, since you're not sharing a cell with Aeonhack, I'm pretty sure you've somehow kept yourself covered legally. I'm actually genuinely interested in where the line is between 'legal' and 'illegal' RAT software since Aeonhack was arrested. Considering that developers have created similar software in the past and haven't been charged legally, I really can't see where prosecutors seem to decide that a piece of software is clearly malicious. The most common example of this would probably be DarkComet by DarkCoderSc. DarkComet was used for years by anyone from kids to governments for spying before

a version was released with a GUI installer and even though the developer went as far as to provide his real information publicly on their website, AFAIK they saw no legal problems.

EZLib Wrote:-snip-

To my knowledge there is no law in existence that differentiates between a 'legal' RAT and an 'illegal' RAT depending on whether or not there is an installation dialog. I can think of several use cases for silent installation with the most obvious being the need to install on every machine within a business. While it wouldn't really be a problem for a small business, having to install a program on anywhere over 50 computers would be much easier to do with a silent installer that could just be sent over the company intranet.

As I stated above, yes, you are correct that there is nothing illegal about Xenocode using the name NetSeal for his product and it is more of a moral issue. That said, while you are correct that there is nothing technically illegal about Xenocode using the NetSeal brand, openly stating that the OP is morally inept in multiple posts within this thread is not exactly the most encouraging thing for potential customers/users of a service that records the types of information that a licensing system. This is especially the case considering types of software that will assumingly be making use the system as well as the fact that the system will 'scan' a users PC on first run.

XenocodeRCE Wrote:-snip-

Back on topic, I see no real improvements or innovative features over existing services other than the core being coded in C++. Every licensing system available on this system seem to just be carbon-copies of NetSeal having maybe one or two tweaks if any. The only exception to this is 961API and that is only in some areas such as a CDN that was not available in other systems while still being identical in most of it. IIRC the original NetSeal did have anti-tampering techniques so that isn't a new feature.

Advanced HWID is, I assume, simply writing the users HWID to the PE so that if it is copied to another PC it will compare the generated HWID to the stored HWID and prevent the program from running. Alert mode is redundant since most people will either forget to or just not delete the original zip/rar that the program was downloaded in unless you are going to start scanning archives. I'd honestly prefer a notification, e.g. a push notification, of frequent exceptions that I could then view on the web panel. Desktop dashboard, why?. Would it not make more sense to have only a web panel and also then provide an API -seperate than the once used by customer products- for developers to integrate the system with their own websites or make their own tools? Remote code execution seems like it would be a good idea but that would depend on how it was set up. Are you planning to manually review each snippet that a developer wants to host? If not how are you preventing malicious use? Are you running the code within a VM and if so how many VMs will you be running and how will you detect and handle compromised VMs? Or maybe you are using the code execution service from AWS for code execution.

It was said earlier in the thread but you haven't really been clear about how features will work and this is genuinely a concern for your potential customers.

tl;dr version:

Armada Wrote:-snip-

While morally questionable, AFAIK there is nothing illegal. Lay off the beer and stop trolling the kids.

EZLib Wrote:-snip-

Yes, nothing illegal. Admitting the OP is morally a scumbag is.....{INSERT\_DEFINATELY\_NOT\_OFFENSIVE\_WORD}

XenocodeRCE Wrote:-snip-

YANC (Yet Another NetSeal Clone) that doesn't really offer any new or innovative features that are not available in existing licensing systems with the exception of RCE but I'm not sure how effective that'll be. That said I'm sure it'll be profitable.

Hello sir ?

Thank you for your kind words :)

Aeonhack got into trouble for explicitly helping malware dev (Mephobia, LimitlessLogger, among others) to sell and infect other members.

Aeonhack also got into trouble for selling his service on hackforums, the judge court thought Aeon implicitly made a service for malware devs.

You can be sure I won't allow malware to use my services, all the malware developpers (like Armada and his illegal RAT) will have to find another, weak, security liensing solution for their piece of crap.

Have a nice day sir ?

(Jun 15, 2018 02:45 AM)Tweety. Wrote: [\[CITE\]](#) first of all aeonhack was charged for netseal, he literally got additional sentencing for it. you're not very smart to use the same name and forum to sell this on are you?

second, why are you using the same name as aeonhacks netseal if you're not using the same code

base? just sounds like you want to make this popular from name alone.

(Jun 15, 2018 02:58 AM)XenocodeRCE Wrote: [\[CITE\]](#) Hello sir ?

I know Aeonhack has been charged for his illegal activities and the former netseal project.

Since Aeon's netseal is dead, the place is free again. It's a marketing move.

Malwares are not allowed on NETSeal. So your fears can be calmed down.

(Jun 15, 2018 03:07 AM)Darkwin Wrote: [\[CITE\]](#) Nothing wrong with OP wanting to revamp it, It isn't like he can call/message Aeonhack and ask for permission.

Besides that nothing illegal about a licensing program.

(Jun 15, 2018 04:49 AM)Armada Wrote: [\[CITE\]](#) It does not work that way.

Whether the project is in development or not, he has legal ownership to the intellectual name.

He could easily sue you and win.

Why is the github repo only have a README????

WHen is he gonna update it..

**Wolfmilan** - August 6, 2018, 2:05 pm

build your own name, don't leach off someone else's.

**VEDDEV** - March 1, 2019, 4:26 pm

To those who were trying to insult Xeno(or Aristocles), don't even bother. The fact that he is not throwing vulgarities and responded peacefully instead of picking up a fight, he has already shown he is a wise guy. I've used his service(NetGuard) for a couple of years, since 2016. Also, good luck with your licensing system. I'm pretty sure you will have a large user base due to your existing customers from NetGuard.

If I remember correctly, he told me he had a Master's in Philosophy and intend to get a PhD.

**PELock** - October 15, 2019, 8:09 am

Our company can crack this shit ass protection in one day. There is nothing innovative in this, don't buy it.

(Oct 15, 2019 08:09 AM)PELock Wrote: [\[CITE\]](#) Our company can crack this Clay Davis ass protection in one day. There is nothing innovative in this, don't buy it.

It has already been proved the files that uses this system cannot be cracked due to the file's code being executed only server side ?

Welcome to NetSeal !

Hi! This project is a revamp of NetSeal, a well-known licensing system developped by Aeonhack, a former HF member. It is made to cover license-management on your software, providing extra security features. If you want to learn about NetSeal, you can read the thread. If you want to play with NetSeal, you need to wait for Beta release (very soon), and you can look at the public exemples on [github](#). If you want to contact us, please do at support [at] netseal [dot] xyz.

Why ?! Where ?! When ?!

This project started because I did not found what I think is a decent security licensing solution

system for little devs like us. This project started in June 2018 and will be released in June 2018. Keep an eye on our up-to-date [project page](#) !

## Features

Our features are meant to be as simple as possible to use and as safe as possible for your application. We implemented some Native Protection on the new NetSeal native Core, Anti debugging techniques, Remote Code Execution on specific method of your assembly, Unlimited Server Variables for you to be able to maximize application dependency over the server, and so much more ... With NetSeal, you have full control over your program.

Features in blue are new features

Other features are just old NetSeal features

[Header over the project's flow](#) to get a visual representation of what is done, what is in progress and what is to do.

As of today, current features are :

Project's core is now native (C++)

New desktop dashboard with automatic installer included

Manage multiple program

Manage all your licences

Manage all your customers

Manage all your server side variables

Automatically install NetSeal to your compiled (.EXE) file

Unlimited server side variables

Online status (shows who is online)

License banning

Detailed logs (limited computer informations, connection count, and IP logs)

License code details (code, created and claim dates, owner, payment tracking)

Timed or unlimited client session

Tracking information (such as PayPal email or transaction ID)

Automatic updates

Machine locking

Compressed updates (less stress on host and faster for users)

Exception logging (find errors in your program)

Choose to receive exceptions directly to your mail[/color]

Native anti debugging and anti reverse engineering techniques to prevent http sniffing as much as possible

Alert mode to remove your application file on every customer's computer

Native loader reserved for first customer's run to scan computer for cracking tools and potential threats

In-built anti tampering techniques making your file dependent from NetSeal as much as possible

Advanced HWID system to bind files to your customer's computer

Remote code execution of specific method from your file in the cloud

Public PropertiesUsername

SessionID

HWID

IP Adress

Licence Code

Licence remaining time

Server-sided update loader to keep your files always up to date automatically

NetSeal core files automatic update

Semi-Automatic Selly.gg integration with our web API

Secure connection (one-way encryption)

Reoccurring server check-in (user stays authenticated and has the latest data)

Hosted system so you don't have to find yourself a host  
Frequent database backups  
Much more to come...

## Code Implementation

Even if the new NetSeal includes an Automatic Installer you are free to hard-code the implementation. It is as simple as possible, really : we kept the same class-only structure the old netseal had. Note that if you use a VB.NET Project you will need to add a reference to System.Management and System.Security. If you don't know how to do that, head over [our Wiki page](#) to read tutorials !

Before starting to implement the system, you must download the adequate class (.CS / .VB) (soon available) and add it to your project.

### C# Implementation

To get a program ID please first create a program on Netseal website..

Code //program.cs

```
using System;
using System.Windows.Forms;

namespace YourProgram
{
    static class Program
    {
        // Declare a public static NetSeal instance
        public static NetSeal ns;

        /// <summary>
        /// The main entry point for the application.
        /// </summary>
        [STAThread]
        static void Main(string[] args)
        {
            Application.EnableVisualStyles();
            Application.SetCompatibleTextRenderingDefault(false);

            // Initialize your NetSeal instance with your program ID
            ns = new NetSeal("put your program Id here");

            Application.Run(new Form1());
        }
    }
}
```

### VB.NET Implementation

To get a program ID please first create a program on Netseal website..

Code Public Class Form1

```
Public ns As NetSeal
```

```
Public sub New()
```

```
ns = New NetSeal("put your program Id here")  
' This call is required by the designer.  
InitializeComponent()
```

```
' Add any initialization after the InitializeComponent() call.
```

```
End Sub  
End Class  
Screenshots
```

If you have any suggestion, please, let me know it ?

Can you please upload the source code to GitHub?

(Jun 8, 2023 04:13 AM)Dyne Wrote: [\[CITE\]](#) This thread is 4+ years old.

Perhaps you can purchase the source from the developer, but I doubt he will upload this for free.  
To see Aeon's tools back on the market, now that's a sight I'd pay for.
