Thread: [\[C#\] NEED A COMPETENT DEV FOR PRIVATE GAME SERVER \[DOFUS\]](#)

CharoLife - June 16, 2018, 1:35 pm

Hello,

Sorry I know it's not the right section, but I do not have access to the programming section before P5

That's it, I'm looking for a competent developpeur to help me on a project.

Let me explain I'm working on the creation of a private server of the game Dofus, with a coded emulator in C # the problem is that the community of emulation of this game is a band of idiots who prefer put the wheels in the wheel and go to war rather than ally and work together to develop a program without errors.

The emulator is very simple to understand for a competent developpeur, and the game itself, and in the worst case, I can help you understand, and the functions I need are simple, only I do not know not very well coding so rather than corrupting even more the emulator I own, I prefer to do it by someone who really knows what he does.

Of course, all work deserves pay, but I can not afford to leave big money, unfortunately I am not very rich but I appreciate that someone wants to help me. There is not much to do per se, and for someone very competent there is less than a full day's work. And of course if there is a charitable soul, who would even accept to do it for free would be even more great! But I have a budget of around 50-60 € for all the functions that I want to add or debug.

Here, contact me here or Discord for more information, I remember that it is not necessary to know the game, it is relatively easy to understand.

Thank you in advance, truthfully yours.
