Thread: [Loader \(Quasar compatibility\)+++](#)

gigajew - June 16, 2018, 8:07 pm

A loader with Quasar compatibility. Very easy to use. Requirements: .NET Framework 4.0 or higher.

Usage:

Code:

Thanks for sharing !

Is there any reason you wanted to keep .NET FW 4.0 dependency ? Its a bit high

gigajew - June 17, 2018, 9:18 am

I feel .NET 4.0 is pretty much standard by now, at least for the home user base.

You can pretty much follow the [.NET Standard](#) 1.0 and be able to cover most machines that use the internet as Windows Update installs newer frameworks, I believe there is an update that pushes all the way up to 4.7.1; also Windows 10 April 2018 update comes with 4.7.2 installed.

This is the update that gets pushed to Windows 7-10 to install 4.7.1

False, executions from exploit kits show that you get great 30-50% decreased executions

It's a common misconception, but 2.0 is a much bigger dependency than 4.0. Not every version is backward compatible.
