Thread: [Buying Monero?](#)

mawrek - June 17, 2018, 1:24 am

monero is \$125 as of writing this post. is this a good time to buy 1? i believe monero is a stable coin to invest in but i'm afraid it won't go above \$1000. what are your thoughts?

Ice - June 17, 2018, 1:32 am

You mention stable, \$125 and going above \$1000 in the same sentence, being stable doesn't just mean it isn't going to dump lol?

I don't know how you can be afraid of a coin not going up but yeah if you're looking for a quickish 8x there could be better alternatives.

stdio - June 17, 2018, 1:32 am

It can easily go to 1k or more in a year or so :)
Buy it if you can.

i meant stable as in it's always (or for a longer time) gonna be between 100-600\$

'Between \$100-\$600" If you buy at \$100 you make 500% your money? You call that stable? Because I definitely don't.

Depends on the drug market, if there is more demand for drugs, there is more demand for monero to facilitate the transaction.
