"(aimtype 3 / Auto Setup will ignore all your aimbot settings and set it up fitting to your hardware, latency, sensitivity, enemy distance, your own aim and other factors)"

Sounds interesting, goodluck with sales.

imi-tat0r - June 17, 2018, 10:03 am

why do your builds differ from 1.3mb to almost 8mb. What could cause this except for Junkcode?

What could cause this except for Junkcode? Probably exactly that.

How could he be UD on so much leagues otherwise, kappa

What looks odd is the hwid spoofer, always thought it was weird.

Why would you need something like that for mostly serversides AC or ACs that do not even hwid ban.

And funnily, its reserved to lifetime customers.

Also, "World first cheat with official VACnet Support" wot?

Saw that aswell, the whole description is weird, I guess he's just writing to the memory. However, never heard of forwardbacktrack ever.

Menalix - June 18, 2018, 12:43 am

Seems rubbish, and I don't like how your domain is so skeet inspired.

"Unlike other cheatproviders where every user receives the same product, legitSense offers an easy to use tool to generate unique builds of our client with one click"

- every cheat provider

>.cc

>[name]sense

:killitwithfire:

EDIT: For forwardbacktrack, it's just called forward-tracking lol.

WinA - June 18, 2018, 1:52 am

is this OBS safe? or so stream safe in anyway

Laughing Man - June 19, 2018, 11:12 am

Yeah, I'd avoid this like the plague, something is very off and this seems very sketchy.

Crystallize. - June 19, 2018, 10:36 pm

Sounded cool until I saw the replies. :/

Eh well at least you tried OP.

S.Girl - June 20, 2018, 9:28 pm

Just excellent! He's really great. I recommend it!

20/20 for me!
