Thread: [LG Aristo 2 Pattern Lockscreen Bypass](#)

Tactical Herpes - June 17, 2018, 6:53 am

Unfortunately I've forgotten the lock screen pattern to my old phone and would like to salvage some videos and photos from the phone. Does anyone know a legit method to bypass the pattern lock without losing data?

The phone is on a stock rom with no custom recovery, and usb debugging is not enabled.

Any and all help is appreciated

I should've mentioned that I am running on a stock rom. I've had the file, but I'm unsure of how to flash it.

First flash a custom recovery
then flash the zip through recovery

Won't I need usb debugging enabled to flash a custom recovery? I don't have it enabled on this phone

No flash through download mode or bootloader which ever your phone has

I have found a download mode, but it throws me to a screen that says firmware update and I'm not sure what to do from here. There is no option for me to install anything from my external storage.

Connect to computer and flash

Try this
untill step 4

Do you know what command I would use in order to flash the zip file? I tried 'fastboot flash recovery (location of file)' and it told me the recovery img doesnt exist.

I also tried 'adb sideload Lockscreen_FIXER.zip' and it told me it couldnt read the file.

You need to boot your phone into fastboot mode then connect to your pc
then flash recovery img
then flash the zip through recovery mode on the phone
