is it possible to hack wifi if you dont have a wifi adapter??

pomwtin - June 18, 2018, 9:02 am

Yes. Log in remotely if remote access is enabled on modem and do whatever you want to its wifi

im a noob can u explain to a noob mans language

broadland - June 19, 2018, 8:23 am

you have to get the exact adapter that backtrack advises to sniff out packets it wont be possible without one unless the one you have is compatible with backtrack if you are using backtrack

Nomad.Null - June 19, 2018, 8:41 am

For one, sniffing packets from a virtual machine is an annoyingly difficult setup. For two, Kali has horrendous driver support so you will most likely need to get an external wifi adapter. I recommend getting one anyway since you need at least two adapters to stay connected to the internet while in monitor mode or setting up a rogue access point. TP-Link cards are decent, cheap, and support monitor mode on 2.4/5ghz bands.

can u give a amazon link of a good wifi adapter

lillpeepa - June 19, 2018, 9:19 am

yes very ez u need speacial soft

what do you mean?

Warzaa-S.A - June 20, 2018, 2:52 am

for good wifi card i think the alfa awus036h is better than others because she has packet injection, monitor mode and a veryyyy good range

gotta go - June 20, 2018, 9:38 pm

you cant use the adapter in your laptop, i tried,

Its not possible, if bakctrack or kali doesnt recognice your wifi adapter (or u dont have one) then you cant put it in monitor mode, use aircrack etc etc.

Buy a usb wifi (or if u have one, try to use tools designed for win, but theyre not as effective)

cthulhu1337 - August 13, 2018, 3:19 pm

get an alfa wifi adapter, those are good for anything

Stuart - February 23, 2019, 11:40 pm

How hacking any wifi ? Give a apk for pc and who are easy to use

Serty - March 2, 2019, 5:51 pm

wifi adapters are the usb sticks that boosts wifi correct?
