Thread: [Portforwarding Tips](#)

\$ zS \$ - August 2, 2010, 7:05 pm

Have you always wanted to portforward but none of the tutorials seems to work for you?

It may be because of a few problems below:You're wired to your router

You don't have a static IP

You're just dumb

Here's a few fixes to these problems:Get on wireless

Connect directly through the modem

Read a tutorial on how to set up a Static IP

Get a brain

This is a short but simple guide, hope you were informed by it.

Uh, wireless or not has nothing to do with it.

The static IP though? Bingo. :p

Actually it does, try portforwarding when your connected directly to your router.

Nicane - August 2, 2010, 9:55 pm

I am doing that right now. O.o I do it all the time.

Hmm...

What router do you use? Connecting through LAN with router does not work for me.
