Thread: [cR4T {Native} {Password tools} STABLE AND ADVANCED REMOTE ADMINISTRATION TOOL!](#)

Hedsen - June 18, 2018, 10:25 pm

Thread closed . sales are still open.

ETH AND BTC ACCEPTED
MONERO OPTION COMING SOON !!

cRAT is a remote administration tool developed in C++ . Been in development for 6 months to ensure that it's 100 % stable and that no bug reports will occur during launch . Thanks to all my testers , and current users of cRAT from other forums. All of cRAT 's functions are tested on all Windows OS to reduce stress during launch . We are re very confident in cRAT's stability. We will be contacting our reviewers from other forums to come to this forum and leave their reviews after testing .

Contact cR4T .

FAQ:
Someone is abusing cRAT, how do i report that person?

- Email cR4T@protonmail.com with information and we will investigate the matter.

What language is this coded in ?

- C++ <3

What is this RAT made for ?

- cRAT is made for people to learn how RAT works, how more silent RAT works and not one's with .NET dependencies . But at the same time it is also designed for business or personal use (your machines , read the TOS for more information) .

Do you offer refunds ?

- If you find something that's said to work but doesn't , we will 100% refund you and you will keep your license .

How do I get support ?

- Email cR4T@protonmail.com

Wait a few days for my testers to come online and register on this forum to leave their reviews and feedback !
