Thread: [Question with thc-hydra](#)

UserBay - June 20, 2018, 9:00 pm

Question1: What programs for linux can i use to crack passwords on web forum with stacked gpu's

Question2: can i use a whole bunch of gpu's with thc hydra on a web formNo hashes!

I want to crack passwords with a web form.

i have 5 gtx 1070's ready to crack and 64 gb ram.

Mr8n - June 20, 2018, 11:16 pm

i think is thc hydra so bad and difficult

you don't need ram for bruteforce , because you will need connection speed to connect to the target

,,

pm me with the target

Your GPU's wont help you to crack any web forms, but would help you to crack hashes all day long...

Not necessarily, as the user above said GPU's are good for cracking hashes. If you're that dedicated to cracking passwords that you bought a computer just for it then you will encounter hashes at some point.

Not too sure on how much dedication is there for hashes, that is what I thought originally also but who knows OP may just charge people money to crack passwords, that is a thing.
