That is hex, same stuff we see in shell code it says:

errorexceptiontracelogonkeypresseventonmousedownonkeydownkeyCodealllayerswhichcaptureEvents

<https://www.rapidtables.com/convert/number/hex-to-ascii.html>

Edit: More than likely you will see another variable or two with hex like this variable, and at the end it will have a place that it calls all these variables.. it's just obfuscation I have seen it on a few compromised sites where the malicious attacker is doing something like messing with cookies, and then doing redirects .. stuff like that.
