Thread: [The best way to surf anonymous](#)

M4GG0 - June 22, 2018, 1:02 am

Hey Guys!

Maybe you can tell me how I surf/hack as anonymous as I can. If someone have some VPN tools and some Proxy lists, please send me or Post it in comment.

Have a nice day
?

Mhanzh - June 22, 2018, 12:35 pm

Mullvad or Anonsocks

You must also configure your browser to avoid ip leak

Juffar - June 22, 2018, 3:03 pm

Using AnonSocks with Proxifier (and edit Proxifier settings to work system-wide and resolve DNS requests through proxy to prevent DNS leaks) is a pretty good start.

Note: there are no 100% ways to make you completely unknown on the internet, there is always a way or another to get your identity.

Here are some ways to leave least traces possible while using the internet:

VPN : connect to the outer world using a VPN server, that might redirect all traffic to the server first, then to you, revealing the server's identity instead of yours.

Onion Networks : connects to the outer world using a set of relays, the most famous one is Tor bundle, it passes all your http/s traffic to a group of relays in order not to make a direct route between the client and the server, thus leaving the server with the least info about the client.

Onion Traffic : connects to the outer world using a set of relays, the difference between this and the previous one is that onion browsers only let you surf the internet using http/s protocols, while this can redirect any of your TCP/IP traffic into a set of relays. An example of such tool is Tails OS.

Social Engineering : do not surf social networks, do not watch web videos, do not install browser plugins, do not use unknown tools, do not download files (even from trusted resources, I'm still winning the bet that none can really guarantee 100% that a resource is safe or not on the internet).

The best way is to use ProxyCAP or Proxifier. And use 5socks.net service for fresh sock5.

Bossbitch24 - June 22, 2018, 6:15 pm

Looking for a legit spammer that have bank logs

How good is it to build a proxychain with Kali?

centennial1304 - June 25, 2018, 1:55 am

Use Phantom VPN
which is available full version at

Greedybaba.com

My experience with proxychain is that it is very buggy and slows down the connection a lot.

I will try

DawnOfTheDead - June 25, 2018, 11:27 am

Just proxifie your whole machine and use a private sock from 5socks.net.
It's 100% safe! Or make your own private sock5 collection with bots..!

A live linux distro based around TOR.

bullet527 - July 19, 2018, 3:06 am

i use a vpn known as express vpn along with an extension on my browser named SetupVPN and
when ever signing in to a forums or website using trash emails that are secure
