Thread: [Nice pro looking translator \[vb.net 2012\]](#)

Kali_Shadow - June 26, 2018, 5:16 am

Hello HF community , I'm New and this is my second project I share with you

It is a simple translator translate via word based translation [not sentences and lines] .. Depending on 10 different tables .

you can select wich tables to get translations from via setting screen .

you can also add new words to the translator database .

PM for the link [can't post links , pictures yet]

I'm always happy to have ur feedbacks and advices , I hope I was helpful somehow .

Regards : Kali_Shadow.

Why don't you just post the source to GitHub or GitLab?
