Thread: [Grub rescue after removing Ubuntu partition](#)

Imfao3zWin - June 26, 2018, 11:45 am

Hello. I removed the Ubuntu partition (Windows 10 dual-booting) and after restarting my computer, I have been stucked in grub rescue. I understood that my grub is installed in MBR and I should to recover the MBR with bootable Windows 10 media because the bootloader was removed but after I create the USB media, my laptop ports don't connect the USB (that happend 2-3 months ago). Soo what I should to do?

I haven't installed any updates for 2-3 months ago, as implied. I tried with DVD but it doesn't give a result - can't create the bootable device <https://prnt.sc/jzm86m> , <https://prnt.sc/jzlrpi>

Please stick to one thread instead of making duplicates. It is annoying to those of us that are helping you for free and only slows down the process.
