Thread: [HTML Form found in redirect page \[high severity\]](#)

Rootomi - June 26, 2018, 1:33 pm

hi alls..

as my subject i scan a target and i found this vulnerabilities (1) HTML Form found in redirect page [high severity] (2) insecure crossdomain.xml file (3) vulnerable javascript library... can you guys guide me how can get access on server using these vulnerability kindly put me on right way .. thanks all

I just google it,

<https://www.acunetix.com/blog/articles/html-form-found-in-redirect-page/>

But the article was too long to read.

thank you mate for your reply

ctrl_alt_del - July 3, 2018, 10:10 pm

You're not going to be able to break into a site with just a redirect. It's not a bad find, though.

KyFu - July 3, 2018, 10:13 pm

Good find, but like "ctrl_alt_del" said, you won't be able to break into the back-end with that.

Look for other vulnerabilities such as SQL or XSS and go from there.

Good luck!
