Thread: [\[Free\] Proxy GRABBER v1.0](#)

21265 - July 1, 2018, 7:10 am

Hello everyone. This is my first ever post ?

This is a small proxy scraper that I made. It automatically scrapes and tests proxies, and saves them to a file. It sorts the proxies based on response time, so fastest at the top, slowest at the bottom. It is multi threaded, and written in python. I made it for linux, but I'm pretty sure you will be able to run it in windows.

There is an install script (install.sh).

You need to have virtualenv installed, so:

```
apt-get install virtualenv
```

```
pacman -S python-virtualenv # for arch
```

Once you have installed virtualenv, just run the script install.sh to install all the dependencies (no need root).

To run the script, activate the virtualenv, then just run with python proxyz.py

The script is easily modified to add new sites to scrape (you only need to add 1 new function), just pm me and I'll show you how if you wanna contribute more sites.

Just ask if you need help installing
